Proceedings of the Conference on Applied Mathematics and Scientific Computing Zlatko

Drmac, Miljenko Marusic, Zvonimir Tutek, 2005-02-23 The Third Conference on Applied Mathematics and Scientific Computing took place June 23-27 2003 on island of Brijuni Croatia. The main goal of the conference was to interchange ideas among applied mathematicians in the broadest sense both from and outside academia as well as experts from other areas who apply different mathematical techniques. During the meeting there were invited and contributed talks and software presentations. Invited presentations were given by active researchers from the fields of approximation theory, numerical methods for differential equations and numerical linear algebra. These proceedings contain research and review papers by invited speakers and selected contributed papers from the fields of applied and numerical mathematics. A particular aim of the conference was to encourage young scientists to present results of their research. Traditionally the best presentation given by PhD student was rewarded. This year awardee was Luka Grubišić, University of Hagen, Hagen, Germany, and we congratulate him for this achievement. It would be hard to organize the conference without generous support of the Croatian Ministry of Science and Technology, and we acknowledge it. We are also indebted to the main organizer, Department of Mathematics, University of Zagreb. Motivating beautiful nature should also be mentioned. And at the end we are thankful to Drs Josip Tambaca and Ivica Nakic for giving this book its final shape.

Multigrid Methods Steven M. Wise, Abner J. Salgado, Calvin Wong, 2025-12-15 This book introduces the theory of multigrid methods for the fast numerical solution of linear and weakly nonlinear elliptic PDE We use the finite element method to discretize the PDE problems as this is the most natural choice and the reader will get a thorough treatment of finite elements No previous exposure to numerical discretization methods is assumed All that is required of the reader is some knowledge of matrix theory Coding the multigrid method is difficult This book will help the reader build basic multigrid codes using easy to read sample Matlab codes We use a matrix based approach in the first part of the book both as a way of presenting the theory in a natural way and as a means for translating the theory into practical codes The operators in the text and codes have the same names which makes reading the sample codes simple even if the reader has never coded We deviate from the matrix based approach only in the presentation of the nonlinear theory in the second part which represents an area of current research The book takes the reader from the basics and simple implementation issues all the way to the front lines of research
