

Colour

Colour is often one of the most exciting components of a painting, but what exactly is it? Understanding the basic principles of colour theory helps you analyse how others might use colour in their work. They use colour together with composition, perspective, and light and shade to strengthen the impact of the artwork itself.

Mixing and comparing colours

The amount of light makes colours visible. Light from a source of different angles, colour and how transparent different pigments or different colours. The range of wavelengths you see is called the visible spectrum; the shorter visible wavelengths appear violet and the longest are red. There are gaps made from quantum jumps that occur some wavelengths and others above. Use of colours in traditional work. The colour in a painting can provide the means of reflecting light.

The colour wheel

From understanding and using the colour wheel, you can learn how to mix and use colours. The colour wheel is a circular diagram that shows the relationships between the primary and secondary colours. It is a useful tool for artists to understand how colours interact and how they can be used together. The wheel is divided into primary and secondary colours, and it shows how these colours are related to each other. The wheel is also used to understand how colours are mixed and how they can be used together.

1. **Primary** colors are the colors that cannot be created by mixing other colors. They are red, yellow, and blue.

Primary and secondary

For many artists, primary colors are the most important. They are the colors that cannot be created by mixing other colors. They are red, yellow, and blue. Secondary colors are created by mixing primary colors. They are orange, green, and purple.

1. **Secondary** colors are created by mixing primary colors. They are orange, green, and purple.

More colour mixtures

More color mixtures can be created by mixing primary and secondary colors. These mixtures are called tertiary colors. They are red-orange, yellow-orange, yellow-green, cyan-green, blue-green, and blue-violet.

Intensity

How artists use colour

It is not just the color but the way it is used that makes a painting. Artists use color to create a mood, to tell a story, to create a sense of depth, and to create a sense of movement. They use color to create a sense of harmony and to create a sense of contrast. They use color to create a sense of balance and to create a sense of rhythm. They use color to create a sense of unity and to create a sense of diversity.
