Assessment that Informs Practice, 2000 Smart Tests Catherine M. Walker, Edgar Schmidt, Kat Mototsune, 2004

High stakes accountability and the growing move towards standardized testing are placing teacher knowledge and assessment skills under ever increasing scrutiny Teachers know what is going on in their classrooms and have first hand reliable evidence of what their students can accomplish They can be the major factor in student assessment and help their students better demonstrate what they have learned Smart Tests shows educators how to create well structured evaluation tools that match assessment tasks to the purpose and content of instruction Teachers learn how to relate testing directly to classroom goals and activities and make assessment an integral part of learning and teaching not just the end result They will find the information they need to build assessment tasks that give students in grades K 8 the opportunity to succeed These tasks encourage students to apply new knowledge reflect and defend their thoughts and opinions and connect what they learn the world beyond the classroom Assessment of Authentic Performance in School Mathematics Richard A. Lesh, Susan J. Lamon, 2013-04-03 This book is the result of a conference sponsored by the Educational Testing Service and the University of Wisconsin s National Center for Research in Mathematical Sciences Education The purpose of the conference was to facilitate the work of a group of scholars whose interests included the assessment of higher order understandings and processes in foundation level pre high school mathematics Discussions focused on such issues as the purposes of assessment guidelines for producing and scoring real life assessment activities and the meanings of such terms as deeper and higher order understanding cognitive objectives and authentic mathematical activities Assessment was viewed as a critical component of complex dynamic and continually adapting educational systems During the time that the chapters in this book were being written sweeping changes in mathematics education were being initiated in response to powerful recent advances in technology cognitive psychology and mathematics as well as to numerous public demands for educational reform These changes have already resulted in significant reappraisals of what it means to understand mathematics of the nature of mathematics teaching and learning and of the real life situations in which mathematics is useful The challenge was to pursue assessment related initiatives that are systematically valid in the sense that they work to complement and enhance other improvements in the educational system rather than act as an impediment to badly needed curriculum reforms To address these issues most chapters in this book focus on clarifying and articulating the goals of assessment and instruction and they stress the content of assessment above its mode of delivery Computer or portfolio based assessments are interpreted as means to ends not as ends in themselves Assessment is conceived as an ongoing documentation process seamless with instruction whose quality hinges upon its ability to provide complete and appropriate information as needed to inform priorities in instructional decision making This book tackles some of the most complicated issues related to assessment and it offers fresh perspectives from leaders in the field with the hope that the ultimate consumer in the
