**Towards HRI of Everyday Life** Karolina Zawieska, Mohammad Obaid , Wafa Johal, Jessica Sorenson, Catharina Vesterager Smedegaard, Glenda Hannibal, 2025-10-03 Presently it is often assumed that at least in principle robots and social robots in particular have the potential to increase human well being across a wide range of sectors and application areas At the same time efforts to introduce such systems into our everyday environments have had only limited success and it is yet to be seen whether the impact of social robots on our daily lives professional and private will actually be beneficial Therefore there is a need to systematically address and study the long term use and presence of social robots in everyday environments where humans not only interact with robots but also have them integrated into the totality of their lived experiences in everyday life One of the main ways to investigate human engagement with social robots in everyday environments is through HRI studies conducted in the wild While such an approach has certainly been instrumental to and is increasingly used in HRI research we propose here to further expand the underlying theoretical and methodological frameworks to address the notion of everyday life The latter is viewed here as a useful concept and an umbrella term that allows us to address not only specific application domains for robots but also the continuity and totality of human lived experiences that emerge through long term engagement with social robots in everyday life contexts Placing social robots in everyday settings has often been an explicit goal for robot development however the

notion of everyday life has yet to be systematically analysed and addressed in this context Therefore this Research Topic aims to bring together a wide range of disciplinary and interdisciplinary contributions to further develop the HRI domain

**Effects of Electromagnetic Radiation on Living Beings** Felix A. Farret,2025-05-06 The objective of this book is to show in detail how electromagnetic waves existing in the environment can affect the electrochemical currents present in the brains and bodies of living beings that serve to communicate with their internal organs as well as with other living beings These electromagnetic waves are distributed intensively by current means of communication television cell phones radar medical equipment electrical machines electrical networks etc and by the stars in the Universe Such waves can affect in one way or another the electrochemical currents of living beings which seem to be currently interpreted as sensations hypnosis telepathy intuition spells mediumship visions and precognition as well as other less widespread forms such as telekinesis radiesthesia clairvoyance precognition and teleportation Several world famous examples of these possibilities are illustrated in the final chapter of this book Key Features 14 examples of diverse international case studies included Challenges conventional ways of thinking by exploring the intersection of electromagnetic waves and extrasensory perception Equips readers with insights into the various effects of electromagnetic waves in daily life which promotes awareness of their environment and its different influences and how they impact people Provides an engineering framework for understanding extrasensory beliefs and aims to explain the concept of historical brain believing in a better manner *Innovation and Experiential Learning in Academic Libraries* Sarah Nagle,Elias Tzoc,2022-03-15 As technology advances and the skills required for the future workforce continue to change rapidly academic libraries have begun to expand the definition of information literacy and the type of library services they provide to better prepare students for the constantly developing world they will face upon graduation More than teaching the newest technologies information literacy is expanding to help students develop enduring skills such as critical thinking creativity problem solving communication teamwork and more *Innovation and Experiential Learning in Academic Libraries Meeting the Needs of 21st Century Students* addresses the multitude of ways that academic librarians are collaborating with faculty and helping students develop these enduring skills by developing and integrating active and experiential learning approaches into teaching activities This book is divided into three sections The first section explores the role that library leaders play in supporting and advocating for innovation in information literacy and library services The second section features case studies from librarians who are implementing novel and multidisciplinary approaches to information literacy and innovative services such as maker scholarship digital humanities undergraduate research experiences and new active learning strategies These case studies also highlight how the COVID 19 pandemic has transformed teaching and learning in academic libraries The final section looks to the future providing guidance to information professionals on the issues and technologies that will drive transformations of information literacy in the coming years such as artificial intelligence and new information literacy applications As such library
