guide If you're comfortable using the command line on Unix or Linux but haven't fully explored Bash this book is for you It's designed for programmers familiar with languages like Python JavaScript or PHP who want to make the most of shell scripting This isn't just another theory-heavy book you'll learn by doing Each chapter builds on the last taking you from shell basics to writing practical scripts that solve real-world problems With nearly a hundred interactive labs you'll gain hands-on experience in automation system administration and troubleshooting While Bash is the primary focus you'll also get a look at Z Shell and PowerShell expanding your skills and adaptability From mastering command redirection and pipelines to writing scripts that work across different Unix-like systems this book equips you for real-world Linux challenges By the end you'll be equipped to write efficient shell scripts that streamline your workflow and improve system automation What you will learn

- Grasp the concept of shells and explore their diverse types for varied system interactions
- Master redirection pipes and compound commands for efficient shell operations
- Leverage text stream filters within scripts for dynamic data manipulation
- Harness functions and build libraries to create modular and reusable shell scripts
- Explore the basic programming constructs that apply to all programming languages
- Engineer portable shell scripts ensuring compatibility across diverse platforms beyond Linux

Who this book is for This book is for programmers who use the command line on Unix and Linux servers already but don't write primarily in Bash This book is ideal for programmers who've been using a scripting language such as Python JavaScript or PHP and would like to understand and use Bash more effectively It's also great for beginning programmers who want to learn programming concepts

**Bash Scripting** John Bach, 2020-09-11 Bash Scripting Think of a script for a play or a movie or a TV show The script tells the actors what they should say and do A script for a computer tells the computer what it should do or say In the context of Bash scripts we are telling the Bash shell what it should do A Bash script is a plain text file which contains a series of commands These commands are a mixture of commands we would normally type ourselves on the command line such as `ls` or `cp` for example and commands we could type on the command line but generally wouldn't you'll discover these over the next few pages An important point to remember though is Anything you can run normally on the command line can be put into a script and it will do exactly the same thing Similarly anything you can put into a script can also be run normally on the command line and it will do exactly the same thing You don't need to change anything Just type the commands as you would normally and they will behave as they would normally It's just that instead of typing them at the command line we are now entering them into a plain text file In this sense if you know how to do stuff at the command line then you already know a fair bit in terms of Bash scripting It is convention to give files that are Bash scripts an extension of `sh` `myscript.sh` for example As you would be aware and if you're not maybe you should consider reviewing our Linux Tutorial Linux is an extensionless system so a script doesn't necessarily have to have this characteristic in order to work
