The Subject Approach to Information Antony Charles Foskett, 1996 The Internet and World Wide Web have made access to information easy but do not solve the problems of finding exactly what is wanted to the point of overwhelming the reader with information. Since the first edition of this classic librarianship text appeared, the development of computer technology has meant that the organization of information has become a hugely complex area. This fifth edition places emphasis on the intellectual effort required to make meaningful use of the enormous amount of information now accessible to the searcher. Fully revised and updated in comprehensive detail that includes bibliographies, ample examples and quotations, it focuses on information retrieval systems, database access systems, online searching and OPACs, hypertext networked systems. Foskett describes how we search for information by looking at the problems involved at the theoretical principles suggested as solutions and their practical realization as classification schemes, lists of subject headings and thesauri. Readership: This influential text is widely acknowledged to be essential reading for all students of librarianship and information management and an invaluable reference tool for practising library and information professionals.

Koupelis' distinct explanations acquaint students with their own solar system before moving on to the stars and distant galaxies. This flexible approach allows instructors to arrange the modules to fit their own course needs. With numerous interactive learning tools, the Starry Night planetary software package and stunning visuals and up-to-date content, *In Quest with the Universe* Sixth Edition is an exciting overview of this ever-changing discipline.

Botany James D. Mauseth, 2009 The fourth edition of *Botany: an introduction to plant biology* provides a thorough and current overview of the fundamentals of botany while retaining the important focus of natural selection, analysis of botanical phenomena and diversity. Students are first introduced to topics that should be most familiar, plant structure, proceed to those less familiar, plant physiology and development, and conclude with topics that are likely least familiar to the introductory student, genetics, evolution and ecology. Sections are written to be self-contained, allowing topics to be covered in various orders.
