can also be run normally on the command line and it will do exactly the same thing You don t need to change anything Just type the commands as you would normally and they will behave as they would normally It s just that instead of typing them at the command line we are now entering them into a plain text file In this sense if you know how to do stuff at the command line then you already know a fair bit in terms of Bash scripting It is convention to give files that are Bash scripts an extension of sh myscript sh for example As you would be aware and if you re not maybe you should consider reviewing our Linux Tutorial Linux is an extensionless system so a script doesn t necessarily have to have this characteristic in order to work
