

### 3.4 – The Circulatory System

Using Pages 83 – 86, answer the following: HW: p 87 # 1-9

#### Basic Functions:

- Is the organ system that **transports substances around the body**
  - moves nutrients absorbed from the intestine to all of the body's cells
  - flows through the lungs to pick up O<sub>2</sub> and delivers it through the body
  - also carries waste from the body tissue for disposal
    - carries CO<sub>2</sub> to the lungs
    - delivers other waste substances to the kidneys where substances are filtered out and excreted
- System also regulates body temperature and transports disease-fighting white blood cells to areas of the body where there are viruses or bacteria

#### Parts of the Circulatory System

##### Blood

- a type of connective tissue that circulates throughout all parts of body

COMPONENT	DESCRIPTION / FUNCTION
Red blood cells	~ 50% of blood's volume • contains protein (hemoglobin) which allows cells to bond to O <sub>2</sub>
White blood cells	~ 1% of blood's volume • protects body against invading bacteria & viruses
Platelets	~ 1% of blood's volume • cells which initiate blood clotting.
Plasma	~ 50% of blood's volume • protein-rich liquid that carries blood cells

##### The Heart

- made of three types of tissue: cardiac muscle tissue, nerves tissue, and connective tissue
- Muscles and nerves are covered by a smooth layer of epithelial tissue. Give reasons why:
  - reduces friction (allows blood to flow freely)
  - protects heart from damage when lungs expand & contract
