**Automotive Spark-Ignited Direct-Injection Gasoline Engines** F. Zhao, M.-C. Lai, D.L. Harrington, 2000-02-08 The process of fuel injection spray atomization and vaporization charge cooling mixture preparation and the control of in cylinder air motion are all being actively researched and this work is reviewed in detail and analyzed The new technologies such as high pressure common rail gasoline injection systems and swirl atomizing gasoline fuel injections are discussed in detail as these technologies along with computer control capabilities have enabled the current new examination of an old objective the direct injection stratified charge DISC gasoline engine The prior work on DISC engines that is relevant to current GDI engine development is also reviewed and discussed The fuel economy and emission data for actual engine configurations have been obtained and assembled for all of the available GDI literature and are reviewed and discussed in detail The types of GDI engines are arranged in four classifications of decreasing complexity and the advantages and disadvantages of each class are noted and explained Emphasis is placed upon consensus trends and conclusions that are evident when taken as a whole thus the GDI researcher is informed regarding the degree to which engine volumetric efficiency and compression ratio can be increased under optimized conditions and as to the extent to which unburned hydrocarbon UBHC NO<sub>x</sub> and particulate emissions can be minimized for specific combustion strategies The critical area of GDI fuel injector deposits and the associated effect on spray geometry and engine performance degradation are reviewed and important system guidelines for minimizing deposition rates and deposit effects are presented The capabilities and limitations of emission control techniques and after treatment hardware are reviewed in depth and a compilation and discussion of areas of consensus on attaining European Japanese and North American emission standards presented All known research prototype and production GDI engines worldwide are reviewed as to performance emissions and fuel economy advantages and for areas requiring further development The engine schematics control diagrams and specifications are compiled and the emission control strategies are illustrated and discussed The influence of lean NO<sub>x</sub> catalysts on the development of late injection stratified charge GDI engines is reviewed and the relative merits of lean burn homogeneous direct injection engines as an option requiring less control complexity are analyzed

Advances in Internal Combustion Engines and Fuel Technologies Hoon Kiat Ng, 2013-03-20 This book highlights the important need for more efficient and environmentally sound combustion technologies that utilise renewable fuels to be continuously developed and adopted The central theme here is two fold internal combustion engines and fuel solutions for combustion systems Internal combustion engines remain as the main propulsion system used for ground transportation and the number of successful developments achieved in recent years is as varied as the new design concepts introduced It is therefore timely that key advances in engine technologies are organised appropriately so that the fundamental processes applications insights and identification of future development can be consolidated In the future and across the developed and emerging markets of the world the range of fuels used will

significantly increase as biofuels new fossil fuel feedstock and processing methods as well as variations in fuel standards continue to influence all combustion technologies used now and in coming streams This presents a challenge requiring better understanding of how the fuel mix influences the combustion processes in various systems The book allows extremes of the theme to be covered in a simple yet progressive way [Focus On: 100 Most Popular Compact Cars](#) Wikipedia contributors,
