Cullen, *Clinical Statistics: Introducing Clinical Trials, Survival Analysis, and Longitudinal Data Analysis* Olga Korosteleva, 2009-10-05 Clinical Statistics Introducing Clinical Trials Survival Analysis and Longitudinal Data Analysis provides the mathematic background necessary for students preparing for a career as a statistician in the biomedical field The manual explains the steps a clinical statistician must take in clinical trials from protocol writing to subject randomization to data monitoring and on to writing a final report to the FDA All of the necessary fundamentals of statistical analysis survival and longitudinal data analysis are included SAS procedures are explained with simple examples and the mathematics behind these SAS procedures are covered in detail with the statistical software program SAS which is implemented throughout the text Complete codes are given for every example found in the text The exercises featured throughout the guide are both theoretical and applied making it appropriate for those moving on to different clinical settings Students will find Clinical Statistics to be a handy lab reference for coursework and in their future careers

**Engineering Mathematics with Mathematica** John S. Robertson, 1995 This supplementary text for applied mathematics courses where Mathematica is used in a laboratory setting is intended to be compatible with a broad range of engineering mathematics texts as well as smaller more specialized texts in differential equations and complex variables It covers topics found in courses on ordinary and partial differential equations vector analysis and applied complex analysis

Students are guided through a series of laboratory exercises that present cogent applications of the mathematics and demonstrate the use of Mathematica as a computational tool to do the mathematics. Relevant applications along with discussions of the results obtained combine to stimulate innovative thinking from the students about additional concepts and applications.

**Engineering Mathematics with Maple** John S. Robertson, 1996 This book is intended for use as a supplemental tool for courses in engineering mathematics applied ordinary and partial differential equations vector analysis applied complex analysis and other advanced courses in which MAPLE is used. Each chapter has been written so that the material it contains may be covered in a typical laboratory session of about 1 1/2 to 2 hours. The goals for every laboratory are stated at the beginning of the chapter. Mathematical concepts are then discussed within a framework of abundant engineering applications and problem solving techniques using MAPLE. Each chapter is also followed by a set of exploratory exercises that are intended to serve as a starting point for a student's mathematical experimentation. Since most of the exercises can be solved in more than one way there is no answer key for either students or professors.
