

BIOLOGY

NOTES

FORM ONE

INTRODUCTION TO BIOLOGY

Biology is a branch of science that deals with the *study of living things*. There are diverse forms of life on earth ranging from the invisible microscopic living things to the gigantic life forms. It aims at explaining the living world in terms of scientific principles. It is important to note, however, that living things interact with the non living things in the environment as well. Biology, therefore also entails the study of non living things as well. The role of human beings in shaping the environment is also investigated in biology. In summary, biology deals with the study of origins, types, nature, growth, development, interactions and maintenance of all life forms on earth.

Branches of Biology

Biology is such a broad field of knowledge. It is divided into two broad branches

1. **Zoology**- This is a branch of biology that deals with the study of animal life.
2. **Botany**- This is a branch of biology that deals with the study of plant life. Within the two branches, there exist even smaller branches because the branches (botany and zoology) are very wide and complex.
