100 | *Section*

Utilized the following chapters from the *Local Programmable Logic Controller* by Dr. Norman Eide: 1997/1998/1999. The first edition of the book was published in 1996, which explains why the word "controller" is present in the title. "Programmable" indicates the device must have a specific function in the architecture of the programmable logic controller (PLC) and a corresponding function of control programming. This is where the chapter proposed here to show the book's value in 2000.

The book is also a collection of 12 sections, each of which provides a very useful introduction to programmable logic controllers and also at least the basis of programming systems using logic. The book is very useful with programmable logic controllers. It addresses the problem of different programmable control systems being using different controllers and program forms for describing the program structure and illustrating their own structure from a number of controllers.

In some the reader is showing the ability to create programs for programmable logic controllers, which would be a good idea. The book is a good one for the reader to be able to create programs for all kinds of logic controllers and programs from the end of the book.

Now, Programmable Logic Controllers is not related to PLCs, but it is a very good introduction to the book. The book is a good one for the reader to be able to create programs for all kinds of logic controllers and programs from the end of the book. The book is a good one for the reader to be able to create programs for all kinds of logic controllers and programs from the end of the book.
