

12. The grass and species names are collectively referred to as the scientific name. It is written in a Latin format as binomial nomenclature, a two-name Latin naming system. There are three rules for writing a scientific name using the system. Analyze the information in Model 2 to complete the table below.

Rule 1: The scientific name is always written in 2 names, with the genus name written capitalized and the species name lowercase.

Rule 2: The scientific name is always written in Latin. If it is handwritten, it is written in a cursive or slanted font.

Rule 3: The first letter of the genus name is a capital letter.

13. The species is used all over the world. Why do you think Latin is used instead of a more popular language?

Yes, in every language, the words that we use to describe things change over time. Latin is a dead language, so it doesn't change.

14. Using the system, would it be possible for two different species to have the same name?

No

15. In Linnaeus's time, classification was based on the appearance of organisms. This does the appearance of organisms such as shape and legs, shells and skeletons, and pigments and eyes. What are the limitations of describing organisms by only their appearance?

You may miss something important. Organisms that look alike may not be related.

For more on this, see Evolution - a country but it's not really biology.

16. Considering advances in science, discuss with your group what might be a more reliable way to study organisms. Use at least three additional ways besides appearance.

- Behavior
- Ways to obtain food
- Adaptations to environment
- DNA analysis
