Assessment, Risk Management, and Decision Making V.T. Covello, Lester B. Lave, Alan Moghissi, V.R.R. Uppuluri, 2013-03-08

The subject of this volume uncertainties in risk assessment and management reflects an important theme in health safety and environmental decision making Most technological hazards are characterized by substantial uncertainty Recent examples include nuclear waste disposal acid rain asbestos in schools carcinogens in food and hazardous waste dealing with such uncertainty is arguably the most difficult and challenging task facing risk assessors and managers today Four primary sources of uncertainty in risk assessment and management can be identified 1 uncertainties about definitions 2 uncertainties about scientific facts 3 uncertainties about risk perceptions and attitudes and 4 uncertainties about values Uncertainties

about definitions derive primarily from disagreements about the meaning and interpretation of key concepts such as probability Uncertainties about scientific facts derive primarily from disagreements about failure modes the probability and magnitude of adverse health or environmental consequences cause and effect relationships dose response relationships and exposure patterns Uncertainties about risk perceptions and attitudes derive primarily from disagreements about what constitutes a significant or acceptable level of risk Uncertainties about values derive primarily from disagreements about the desirability or worth of alternative risk management actions or consequences The papers in this volume address each of these sources of uncertainty from a variety of perspectives Reflecting the broad scope of risk assessment and risk management research the papers include contributions from safety engineers epidemiologists toxicologists chemists biostatisticians biologists decision analysts economists psychologists political scientists sociologists ethicists and lawyers
