## **C Concurrency In Action:**

*C++ Concurrency in Action* Anthony Williams, 2019-02-07 This book should be on every C programmer's desk. It's clear, concise, and valuable. Rob Green, Bowling Green State University. This bestseller has been updated and revised to cover all the latest changes to C 14 and 17. *C Concurrency in Action* Second Edition teaches you everything you need to write robust and elegant multithreaded applications in C 17. Purchase of the print book includes a free eBook in PDF, Kindle, and ePub formats from Manning Publications. About the Technology: You choose C when your applications need to run fast. Well-designed concurrency makes them go even faster. C 17 delivers strong support for the multithreaded multiprocessor programming required for fast graphic processing, machine learning, and other performance-sensitive tasks. This exceptional book unpacks the features, patterns, and best practices of production-grade C concurrency. About the Book: *C Concurrency in Action* Second Edition is the definitive guide to writing elegant multithreaded applications in C. Updated for C 17, it carefully addresses every aspect of concurrent development, from starting new threads to designing fully functional multithreaded algorithms and data structures. Concurrency master Anthony Williams presents examples and practical tasks in every chapter, including insights that will delight even the most experienced developer. What's Inside: Full coverage of new C 17 features: Starting and managing threads, Synchronizing concurrent operations, Designing concurrent code, Debugging multithreaded applications. About the Reader: Written for intermediate C and C++ developers. No prior experience with concurrency required. About the Author: Anthony Williams has been an active member of the BSI C Panel since 2001 and is the developer of the just thread Pro extensions to the C 11 thread library. Table of Contents: Hello world of concurrency in C, Managing threads, Sharing data between threads, Synchronizing concurrent operations, The C memory model and operations on atomic types, Designing lock-based concurrent data structures, Designing lock-free concurrent data structures, Designing concurrent code, Advanced thread management, Parallel algorithms, Testing and debugging multithreaded applications.

**C++ Concurrency in Action** Anthony Williams, 2012. With the new C Standard and Technical Report 2 (TR2), multi-threading is coming to C in a big way. TR2 will provide higher-level synchronization facilities that allow for a much greater level of abstraction and make programming multi-threaded applications simpler and safer. Concurrent programming is required if programmers are to take advantage of the multi-core microprocessors increasingly available from Intel and others. The new standard for C has extensions to the language that make concurrent programming more accessible to regular developers. As a guide and reference to the new concurrency features in the upcoming C Standard and TR2, this book is invaluable for existing programmers familiar with writing multi-threaded code in C using platform-specific APIs or in other languages, as well as C programmers who have never written multithreaded code before.

**Knowledge in Action** Raymond Reiter,2001-07-27 Specifying and implementing dynamical systems with the situation calculus Modeling and implementing dynamical systems is a central problem in artificial intelligence robotics software agents simulation decision and control theory and many other disciplines In recent years a new approach to representing such systems grounded in mathematical logic has been developed within the AI knowledge representation community This book presents a comprehensive treatment of these ideas basing its theoretical and implementation foundations on the situation calculus a dialect of first order logic Within this framework it develops many features of dynamical systems modeling including time processes concurrency exogenous events reactivity sensing and knowledge probabilistic uncertainty and decision theory It also describes and implements a new family of high level programming languages suitable for writing control programs for dynamical systems Finally it includes situation calculus specifications for a wide range of examples drawn from cognitive robotics planning simulation databases and decision theory together with all the implementation code for these examples This code is available on the book s Web site

**Low Power Hardware Synthesis from Concurrent Action-Oriented Specifications** Gaurav Singh,Sandeep Kumar Shukla,2010-07-23 Human lives are getting increasingly entangled with technology especially comp ing and electronics At each step we take especially in a developing world we are dependent on various gadgets such as cell phones handheld PDAs netbooks me cal prosthetic devices and medical measurement devices e g blood pressure m itors glucometers Two important design

constraints for such consumer electronics are their form factor and battery life This translates to the requirements of reduction in the die area and reduced power consumption for the semiconductor chips that go inside these gadgets Performance is also important as increasingly sophisticated applications run on these devices and many of them require fast response time The form factor of such electronics goods depends not only on the overall area of the chips inside them but also on the packaging which depends on thermal characteristics Thermal characteristics in turn depend on peak power signature of the chips As a result while the overall energy usage reduction increases battery life peak power reduction influences the form factor One more important aspect of these electronic equipments is that every 6 months or so a newer feature needs to be added to keep ahead of the market competition and hence new designs have to be completed with these new features better form factor battery life and performance every few months This extreme pressure on the time to market is another force that drives the innovations in design automation of semiconductor chips
