Numerical Optimization Techniques For Engineering Design Solution:

OPTIMIZATION FOR ENGINEERING DESIGN KALYANMOY DEB,2012-11-18 This well received book now in its second edition continues to provide a number of optimization algorithms which are commonly used in computer aided engineering design The book begins with simple single variable optimization techniques and then goes on to give unconstrained and constrained optimization techniques in a step by step format so that they can be coded in any user specific computer language In addition to classical optimization methods the book also discusses Genetic Algorithms and Simulated Annealing which are widely used in engineering design problems because of their ability to find global optimum solutions The second edition adds several new topics of optimization such as design and manufacturing data fitting and regression inverse problems scheduling and routing data mining intelligent system design Lagrangian duality theory and quadratic programming and its extension to sequential quadratic programming It also extensively revises the linear programming algorithms section in the Appendix This edition also includes more number of exercise problems The book is suitable for senior undergraduate postgraduate students of mechanical production and chemical engineering Students in other branches of engineering offering optimization courses as well as designers and decision makers will also find the book useful Key Features Algorithms are presented in a step by step format to facilitate coding in a computer language Sample computer programs in FORTRAN are appended for better comprehension Worked out examples are illustrated for easy understanding The same example problems are solved with most algorithms for a comparative evaluation of the algorithms

Knowledge Incorporation in Evolutionary Computation Yaochu Jin,2004-10-20 Incorporation of a priori knowledge such as expert knowledge meta heuristics and human preferences as well as domain knowledge acquired during evolutionary search into evolutionary algorithms has received increasing interest in the recent years It has been shown from various motivations that knowledge incorporation into evolutionary search is able to significantly improve search efficiency However results on knowledge incorporation in evolutionary computation have been scattered in a wide range of research areas and a systematic handling of this important topic in evolutionary computation still lacks This edited book is a first attempt to put together the state of art and recent advances on knowledge incorporation in evolutionary computation within a unified framework Existing methods for knowledge incorporation are divided into the following five categories according to the functionality of the incorporated knowledge in the evolutionary algorithms 1 Knowledge incorporation in representation population initialization combination and mutation 2 Knowledge incorporation in selection and reproduction 3 Knowledge incorporation in fitness evaluations 4 Knowledge incorporation through life time learning and human computer interactions 5 Incorporation of human preferences in multi objective evolutionary computation The intended readers of this book are graduate students researchers and practitioners in all fields of science and engineering who are interested in evolutionary computation The book is divided into six parts Part I contains one introductory chapter titled A selected introduction to evolutionary computation by Yao which presents a concise but insightful introduction to evolutionary computation
