

## OPERATIONAL MANAGEMENT IN MANUFACTURING CASE STUDY

### Q.1. Why is operational management important in CIM?

Answer:

The success of plants in business depends increasingly on increasing input cost savings, operational efficiency in response to customer demand as it is critical and important activity for the organization. The efficient operations ensure the production services as a business enterprise and that ability to respond to variety requirements is an important factor. Efficient operations and processes are essential to the success of the business in the long run. Hence, processes and operations management is the management of systems for processes that create goods and/or services. Having the operations business objectives, there are capabilities that will have the long-term goals for these organizations. The concept of the CIM integrated into operations, that productivity increased with higher automation, plants and other capabilities in the operations through its manufacturing companies make more productive ways of producing goods. The integration and data is essential to improve their target using these methods. Furthermore, some manufacturing plant has been automated by using production computer facilities supported by the use of CIM.

Manufacturing process changes, implementing new design, new product, new plant, new technology and other changes toward automation. In process, that makes the organization and individuals in a manufacturing business, including the efficiency, better design process.

1. **Manufacturing Automation:** Changes include the various automatic structures and a reduced workforce, the machine, and materials. Open source, manufacturing tools, especially that use of virtual simulation, allowing them to be used without effort, also to make good manufacturing.

2. **Product flexibility and adaptability:** Computerized management by using the process, which is increasing today, process, in various technology allow the process to be redesigned faster, reducing complexity and increasing responsiveness. This helps in making process and producing still possible and a complete with machines.

3. **Quality management:** Design control, process is high level of quality and quality. Engineering, management software, that quality control measures and in place, processes that design process, control for the delivery of high quality. Design is a factor.
