HVAC Cooling Load - Calculations and Principles A. Bhatia, 2014-10-16 Heating and cooling load calculations are carried out to estimate the required capacity of heating and cooling systems which can maintain the required conditions in the conditioned space To estimate the required cooling or heating capacities one has to have information regarding the design indoor and outdoor conditions specifications of the building specifications of the conditioned space such as the occupancy activity level various appliances and equipment used etc and any special requirements of the particular application For comfort applications the required indoor conditions are fixed by the criterion of thermal comfort while for industrial or commercial applications the required indoor conditions are fixed by the particular processes being performed or the products being stored Generally heating and cooling load calculations involve a systematic and stepwise procedure which account for all the building energy flows In practice a variety of methods ranging from simple rules of thumb to complex transfer function methods are used to arrive at the building loads This short quick book provides a procedure for preparing a manual calculation for cooling load using CLTD CLF method suggested by ASHRAE and includes two detailed examples For more advanced methods such as TFM the reader should refer to ASHRAE and other handbooks Learning Objective At the end of this course the student should be able to

environmental variables the demand for tailored efficient cooling solutions has intensified In industries ranging from electronics and pharmaceuticals to automotive and food production precise temperature and humidity control are essential for both operational stability and regulatory compliance This book Manufacturing Facilities Cooling and Applications was created to provide a comprehensive guide for engineers facility managers and industry professionals seeking to design implement and maintain cooling systems that meet the unique demands of manufacturing environments By exploring the fundamentals of cooling technology and delving into specific applications across diverse manufacturing sectors this book offers practical insights and tools to achieve effective cooling with a focus on energy efficiency sustainability and cost effectiveness Within these pages you will find discussions on a wide range of cooling systems from direct and indirect cooling methods to the latest advancements in automation and energy saving technologies We will explore the unique challenges posed by various manufacturing processes addressing issues like high heat loads contaminant control and extreme humidity management Real world case studies and examples provide insight into how leading facilities are leveraging innovative cooling solutions to enhance productivity and reduce their environmental footprint It is my hope that this book serves as both an educational resource and a practical reference empowering readers to make informed decisions about cooling system design operation and maintenance By adopting strategies that align with industry best practices and sustainability goals manufacturers can achieve optimal performance while minimizing their impact on the environment Thank you for joining me on this exploration of cooling technology in manufacturing I look forward to the knowledge and innovations that will emerge as we collectively work toward more sustainable and efficient manufacturing facilities Charles Nehme

Load Calculation Applications Manual Jeffrey D. Spitler, 2009 The Load Calculation Applications Manual builds upon three previous ASHRAE publications that focus on the calculation of cooling and heating loads for commercial buildings Whether you are a new engineer who is learning how to do load calculations or a veteran who wishes to learn the radiant time series RTS method this book is a must have resource Outlined in the manual are two methods for calculating cooling loads in nonresidential buildings the heat balance HB method and the RTS method Both methods were first fully presented for use in design load calculations in the predecessor to this volume Cooling and Heating Load Calculation Principles But much has changed since the book was first published in 1998 The Load Calculation Applications Manual steps in where the last book left off to provide you with the latest information regarding load calculations In the book s early chapters an overview of the heat transfer processes present in buildings and a brief discussion of how they are analyzed together in order to determine the cooling load are provided Later chapters focus on the theory and application of the RTS method systems and psychrometrics heating load calculations and the HB method and its implementation The accompanying CD contains Microsoft Excel spreadsheets that compute cooling loads using the RTS method These spreadsheets calculate the solar irradiation conduction time factor series and radiant time factors utilized by the method Plus you can adapt the spreadsheets to compute cooling loads for a
