*Handbook of Research on Integrating ICTs in STEAM Education* Xefteris, Stefanos, 2022-05-27 Modern society gives great importance to scientific and technological literacy, development of 21st-century skills, and creating individuals who are not passive users of ICT tools but active thinkers and even tinkerers. The learning process is thus constantly evolving to facilitate the acquisition of such skills, such as setting goals and making evidence-based decisions, thinking critically, and solving problems while efficiently managing time, as well as using technology cooperatively, ethically, and communicating effectively. STEAM is the approach to learning that uses concepts from natural sciences, technology, engineering, arts, and mathematics to foster critical thinking, computational, and design thinking, as well as working effectively together, mimicking the process followed by scientists. The end goal is engaged and motivated students who participate in experiential and inquiry-based learning in fun, immersive environments that facilitate learning through a creative process. The *Handbook of Research on Integrating ICTs in STEAM Education* includes current research focusing on the development of STEAM and ICT educational practices, tools, workflows, and frames of operation that encourage science skills but also skills related to the arts and humanities, such as creativity, imagination, and reflection on ethical implications. Covering topics such as early childhood education, machine learning,
