Advanced Compiler Design Implementation Steven Muchnick,1997-08 Computer professionals who need to understand advanced techniques for designing efficient compilers will need this book It provides complete coverage of advanced issues in the design of compilers with a major emphasis on creating highly optimizing scalar compilers It includes interviews and printed documentation from designers and implementors of real world compilation systems Advanced Compiler Design and Implementation Steven S. Muchnick,1997 Languages and Compilers for Parallel Computing Lawrence Rauchwerger,2004-02-25 This book constitutes the thoroughly refereed post proceedings of the 16th International Workshop on Languages and Compilers for Parallel Computing LCPC 2003 held in College Station Texas USA in October 2003 The 35 revised full papers presented were selected from 48 submissions during two rounds of reviewing and improvement upon presentation at the workshop The papers are organized in topical sections on adaptive optimization data locality parallel languages high level transformations embedded systems distributed systems software low level transformations compiling for novel architectures and optimization infrastructure *Retargetable Compiler Technology for Embedded Systems* Rainer Leupers,Peter Marwedel,2013-03-09 It is well known that embedded systems have to be implemented efficiently This requires that processors optimized for certain application domains are used in embedded systems Such an optimization requires a careful exploration of the design space including a detailed study of cost performance tradeoffs In order to avoid time consuming assembly language programming during design space exploration compilers are needed In order to analyze the effect of various software or hardware configurations on the performance retargetable compilers are needed that can generate code for numerous different potential hardware configurations This book provides a comprehensive and up to date overview of the fast developing area of retargetable compilers for embedded systems It describes a large set important tools as well as applications of retargetable compilers at different levels in the design flow Retargetable Compiler Technology for Embedded Systems is mostly self contained and requires only fundamental knowledge in software and compiler design It is intended to be a key reference for researchers and designers working on software compilers and processor optimization for embedded systems System-on-Chip Bashir M. Al-Hashimi,2006-01-31 This book highlights both the key achievements of electronic systems design targeting SoC implementation style and the future challenges presented by the continuing scaling of CMOS technology *Multimedia, Computer Graphics and Broadcasting, Part I* Tai-hoon Kim,Hojjat Adeli,William I. Grosky,Niki Pissinou,Timothy K. Shih,Edward J. Rothwell,Byeong-Ho Kang,Seung-Jung Shin,2011-12-03 The two volume set CCIS 262 and 263 constitutes the refereed proceedings of the International Conference MulGraB 2011 held as Part of the Future Generation Information Technology Conference FGIT 2011 in conjunction with GDC 2011 Jeju Island Korea in December 2011 The papers presented were carefully reviewed and selected from numerous submissions and focus on the various aspects of multimedia computer graphics and broadcasting

FM'99 - Formal Methods Jeannette M. Wing, Jim Woodcock, Jim Davies, 2003-07-31 Formal methods are coming of age. Mathematical techniques and tools are now regarded as an important part of the development process in a wide range of industrial and governmental organisations. A transfer of technology into the mainstream of systems development is slowly but surely taking place. FM 99 the First World Congress on Formal Methods in the Development of Computing Systems is a result and a measure of this new found maturity. It brings an impressive array of industrial and applications oriented papers that show how formal methods have been used to tackle real problems. These proceedings are a record of the technical symposium of FM 99 also the papers describing applications of formal methods you will find technical reports papers and abstracts detailing new advances in formal techniques from mathematical foundations to practical tools. The World Congress is the successor to the four Formal Methods Europe Symposia which in turn succeeded the four VDM Europe Symposia. This session reflects an increasing openness within the international community of researchers and practitioners. Papers were submitted covering a wide variety of formal methods and application areas. The programme committee reflects the Congress's international nature with a membership of 84 leading researchers from 38 different countries. The committee was divided into 19 tracks each with its own chair to oversee the reviewing process. Our collective task was a difficult one there were 259 high quality submissions from 35 different countries.

Low-Power Processors and Systems on Chips Christian Piguet, 2018-10-03 The power consumption of microprocessors is one of the most important challenges of high performance chips and portable devices. In chapters drawn from Piguet's recently published *Low Power Electronics Design* this volume addresses the design of low power microprocessors in deep submicron technologies. It provides a focused reference for specialists involved in systems on chips from low power microprocessors to DSP cores, reconfigurable processors, memories, ad hoc networks and embedded software. *Low Power Processors and Systems on Chips* is organized into three broad sections for convenient access. The first section examines the design of digital signal processors for embedded applications and techniques for reducing dynamic and static power at the electrical and system levels. The second part describes several aspects of low power systems on chips including hardware and embedded software aspects, efficient data storage networks on chips and applications such as routing strategies in wireless RF sensing and actuating devices. The final section discusses embedded software issues including details on compilers, retargetable compilers and verification tools. Providing detailed examinations contributed by leading experts, *Low Power Processors and Systems on Chips* supplies authoritative information on how to maintain high performance while lowering power consumption in modern processors and SoCs. It is a must read for anyone designing modern computers or embedded systems.
