Distributed Denial of Service (DDoS) Attacks and IoT Security Eric Wang,Robert Joodat,2017-09-20 Technical Report from the year 2017 in the subject Computer Science IT Security grade N A University of Technology Sydney language English abstract The purpose of this report investigates the present state of Internet of Things IoT devices It highlights the current security issues of using IoT devices and discusses its possible solutions to maximise security and minimise DDoS and cyberattacks The measures that needs to be considered to prevent attacks on IoT devices from Mirai botnet has been highlighted which include the use of cloudflare s orbit and other general security practices Cloudflare s orbit allows manufactures to implement virtual patches for vulnerabilities found in IoT devices until those vulnerabilities are fixed through software updates **High Speed Network Security** Abdul Aziz A Mohammed,2002 **Using Bittorent protocol to launch DDoS attacks** Ashan Maduranga,2015-02-10 Essay from the year 2012 in the subject Computer Science IT Security language English abstract In a nutshell what the researcher hopes to achieve by this project is to develop a practical solution to control Distributed Denial of Service DDoS attacks launched using BitTorrent protocol by tweaking the source code of an

existing open source BitTorrent client Even though BitTorrent is a useful protocol it could be misused to launch DDoS attacks Since the number who uses BitTorrent protocol is high by launching a DDoS the victim s machine could be crippled Hence as a remedy to the issue this report is formulated so that it discusses how the attacks are done and how it could be prevented For a simple analogical demonstration of what this attack does take a look at figure 1 where computer A cannot fulfill the requests of a legit user computer B this is what DDoS attack does After enhancing the security architecture of BitTorrent client this problem would not occur hence it is improved to control these attacks

Network Security by Preventing DDOS Attack Using Honeypot Selvaraj Rajalakshmi,2017

Network Security and Intrusion Attacks Mohammad,Mohammad Faris,2012

Network security is an open area of applied concepts of computer sciences that has gained a lot of attention over past few years Intrusion attacks particularly Distributed Denial of Service DDOS have become one of the greatest threats to the network security To assess the network security and to deduce precautionary measures it is important to analyze how much a network is vulnerable to such intrusion attacks The research covered in this book demonstrates a simulated flood based DDOS attack on a university network With the help of obtained graphical results behavior of the network under intrusion attacks is analyzed to assess vulnerability and survivability of the network On the basis of our analysis countermeasures and possible enhancements to improve the network security against such intrusions are highlighted We consider this book as a first step towards our future work regarding intrusion detection and prevention system design
