Robust Statistics Through the Monitoring Approach Anthony C. Atkinson, Marco Riani, Aldo Corbellini, Domenico Perrotta, Valentin Todorov, 2025-07-26 This open access book presents robust statistical methods and procedures through the monitoring approach with an emphasis on applications to linear regression Illustrating the theory it explores both large and small sample properties The performance of the forward search and of the monitoring of static robust estimators for regression data are illuminated through numerous data analyses using MATLAB and R The book describes the results of many years work of the authors in the development of powerful methods of robust regression analysis Robust methods are designed to analyse contaminated data The well established static robust methods estimate model features such as parameter estimates assuming the amount of contamination in the data is known These methods are described in detail in Chapter 2 for estimation in a simple sample The extension to regression is presented in Chapter 3 with an emphasis on S estimation and related procedures as well as on least trimmed squares The monitoring methods of Chapter 4 including the forward search find the appropriate level of robustness for each data set and so avoid biased estimation from the inclusion of outliers and inefficiency due to the deletion of uncontaminated observations This analysis is followed by examples which illustrate the use of the interactive graphical analyses associated with the authors FSDA toolbox Numerical comparisons of the size and power of outlier tests appear in Chapter 5 Later chapters illustrate applications to response transformation in regression and to non parametric regression Extensions of the robust multiple regression model include Bayesian heteroskedastic time series and compositional regression together with the clustering of regression models Finally several approaches to model selection are investigated and robust analyses of regression data are presented that illustrate the use of the techniques introduced earlier Exercises are given at the end of each chapter with solutions at the end of the book The MATLAB code can be reproduced using MATLAB Online without the need for a license or via the language agnostic Jupyter notebook environment after installing the MATLAB kernel Online computer code is available for all examples and exercises together with a series of YouTube videos Aimed at professional statisticians and researchers concerned with insightful data analysis as well as postgraduate students the book may also

Public Support for Species Conservation Policies Valentina Fomenko, 2003 The arduous task of finding a solution to the enduring salmon crisis calls for a non trivial comprehensive approach Such a solution is likely to affect virtually everyone in the Pacific Northwest Ensuring public understanding of and support for species restoration policies is especially important because many of such policies involve making difficult trade offs This issue is especially relevant to the situation in Oregon where citizens are directly involved in environmental policy making thus public support for salmon restoration options is a vital component of the policy process This study was designed to identify the major factors influencing public support for salmon restoration policies including policy relevant knowledge risk perception ideological and attitudinal factors as well as a sense of political efficacy and social trust Key findings indicate that ideological and attitudinal factors are the most important predictors of public support for salmon restoration alternatives such as removal of hydroelectric dams limiting certain agricultural and forestry practices elimination of hatcheries and urban stream protection measures Ideological and attitudinal variables have both direct and indirect impacts on policy support In addition higher levels of social trust and a sense of political efficacy also led to stronger support for salmon restoration policies The results presented in this study suggest the need for a more holistic approach to understanding the sources and assessing the limits of public support for salmon restoration options In general both outreach and research activities should concentrate on overcoming the negative impacts of ideological and attitudinal cleavages and reconciling seemingly insurmountable differences in opinions on salmon policy Providing additional knowledge should be tailored to the needs of the various constituencies and should be sensitive to a wide range of ideological stances and attitudinal positions **Integrated Ecosystem Studies of Western Antarctic**
