Klein, 1999 First published in 1993 this Tutorial Text has been revised and updated to provide explanations and examples of data fusion algorithms in areas not covered in the first edition These include Bayesian inference artificial neural networks and fuzzy logic All of the chapters in the first edition have been revised and updated and new material is included on the FASCODE and MODTRAN atmospheric models and EOSAEL which analyzes physical processes that affect the performance of millimeter wave and IR sensors Statistical Multisource-multitarget Information Fusion Ronald P. S. Mahler, 2007 This comprehensive resource provides you with an in depth understanding of finite set statistics FISST ndash a recently developed method which unifies much of information fusion under a single probabilistic in fact Bayesian paradigm The book helps you master FISST concepts techniques and algorithms so you can use FISST to address real world challenges in the field You learn how to model fuse and process highly disparate information sources and detect and track non cooperative individual platform groups and conventional non cooperative targets **Sensor Fusion: Architectures, Algorithms, and Applications**, 2000 Data Fusion: Concepts and Ideas H B Mitchell, 2012-02-09 This textbook provides a comprehensive introduction to the concepts and idea of multisensor data fusion It is an extensively revised second edition of the author s successful book Multi Sensor Data Fusion An Introduction which was originally published by Springer Verlag in 2007 The main changes in the new book are New Material Apart from one new chapter there are approximately 30 new sections 50 new examples and 100 new references At the same time material which is out of date has been eliminated and the remaining text has been rewritten for added clarity Altogether the new book is nearly 70 pages longer than the original book Matlab code Where appropriate we have given details of Matlab code which may be downloaded from the worldwide web In a few places where such code is not readily available we have included Matlab code in the body of the text Layout The layout and typography has been revised Examples and Matlab code now appear on a gray background for easy identification and advanced material is marked with an asterisk The book is intended to be self contained No previous knowledge of multi sensor data fusion is assumed although some familiarity with the basic tools of linear algebra calculus and simple probability is recommended Although conceptually simple the study of mult sensor data fusion presents challenges that are unique within the education of the electrical engineer or computer scientist To become competent in the field the student must become familiar with tools taken from a wide range of

diverse subjects including neural networks signal processing statistical estimation tracking algorithms computer vision and control theory All too often the student views multi sensor data fusion as a miscellaneous assortment of different processes which bear no relationship to each other In contrast in this book the processes are unified by using a common statistical framework As a consequence the underlying pattern of relationships that exists between the different methodologies is made evident The book is illustrated with many real life examples taken from a diverse range of applications and contains an extensive list of modern references
