**Biological Systematics** Igor Pavlinov, 2021-03-25 This volume reviews the historical roots and theoretical foundations of biological systematics in an approachable text. The author outlines the structure and main tasks of systematics. Conceptual history is characterized as a succession of scientific revolutions. The philosophical foundations of systematic research are briefly reviewed as well as the structure and content of taxonomic theories. Most important research programs in systematics are outlined. The book includes analysis of the principal problematic issues as scientific puzzles in systematics. This volume is intended for professional taxonomists, biologists of various specialties, students as well as all those interested in the history and theory of biology and natural sciences.

**Key Features:** Considers the conceptual history of systematics as the framework of evolutionary epistemology. Builds a hierarchically organized quasi-axiomatic system of taxonomic theory. Contends that more reductionist taxonomic concepts are less objective. Supports taxonomic pluralism by non-classic philosophy of science as a normal condition of systematics. Documents that taxonomic puzzles result from conflict between monistic and pluralistic attitudes.
