**Development of Biomass Gasification Technology in India** Willem Christiaens,2010-09 This work analyses the development of biomass gasification in India where it takes off with presenting brief historical narrative of past experiments and commercial installations The analysis adopts the framework of Strategic Niche Management in its analysis and applies it to draw conclusions on the past and future development of the technology With the high expectations on the technology s applicability after the first lab scale experiments hundreds of small scale gasifiers where deployed throughout rural India with mixed success Previous expectations proved wrong and new applications for the technology where sought The technology demonstrated to be easier to use in the Industrial setting where it competed with diesel fired burners that gradually became expensive to operate due to increasing fossil fuel prices Also other niches where found for the technology to work in successfully such as crematoria The research is partially based on an 8 month field study where over 40 stakeholders have been interviewed and gasifier installations have been visited *Advanced Biofuels* Kalam Abul Azad,Mohammad Rasul,2019-06-09 *Advanced Biofuels Applications Technologies and Environmental Sustainability* presents recent developments and applications of biofuels in the field of internal combustion engines with a primary focus on the recent approaches of biodiesel applications low emission alternative fuels and environmental sustainability Editors Dr Azad and Dr Rasul along with their team of expert contributors combine a collection of extensive experimental investigations on engine performance and emissions and combustion phenomena using different types of oxygenated fuel with in depth research on fuel applications an analysis of available technologies and resources energy efficiency improvement methods and applications of oxygenated fuel for the sustainable environment Academics researchers engineers and technologists will develop a greater understanding of the relevant concepts and solutions to the global issues related to achieving alternative energy application for future energy security as well as environmental sustainability in medium and large scale industries Fills a gap in the literature on alternative fuel applications with in depth research and experimental investigations of different approaches technologies and applications Considers the important issue of sustainability using case studies to deepen understanding Includes energy security within various industries including aviation and transport **Advances in Environmental Research** Charles V. Rades,Evan B. Tilesman,2008 The environment consists of the surroundings in which an organism operates including air water land natural resources flora fauna humans and their interrelation It is this environment which is both so valuable on the one hand and so endangered on the other And it is people which are by and large ruining the environment both for themselves and for all other organisms This series covers leading edge research in a cross section of fields centring on the environment *Emerging Trends and Techniques in Biofuel Production from Agricultural Waste* Pardeep Singh,2024-02-23 This edited book focuses primarily on biofuel production potential in agricultural waste such as biogas generation biohydrogen production and research trends on managing or converting

agricultural waste to biofuel This book also draws attention to technological equipment generated biofuels from agricultural waste through various biological and chemical processes and the multiple factors responsible for biofuels from agricultural waste generation Agriculture waste can be a renewable source of lignocellulosic feedstock for value added products Considering the non replaceable fossil fuel reservoir the exponentially growing human population urges an immediate search for alternative renewable energies To confront the upcoming energy crisis lignocellulosic agricultural waste is expected to be a sustainable renewable low cost resource to derive bioenergy because of its high availability This book will be of interest to researchers scientists and scholars working on agriculture waste management and biogas production The book also serves as additional reading material for Industrial professionals master s and degree students policymakers and NGOs working on biofuels and sustainable energy production
