## Student Exploration: Rainfall and Bird Beaks

**Vocabulary:** adaptation, beak depth, directional selection, drought, evolution, natural selection, range, stabilizing selection

**Prior Knowledge Questions** (Do these BEFORE using the Gizmo.)

During the voyage of the HMS *Beagle* (1831–1836), the young Charles Darwin collected several species of finches from the Galápagos Islands. Two of Darwin's finches are shown below.

*Geospiza magnirostris*

*Geospiza fortis*

1. Which species do you think is best adapted to a diet of small, delicate seeds? Explain why you think so.

**The *Geospiza fortis*:** It has a small, thin beak for picking small seeds up.

2. Which species do you think is best adapted to a diet of large, tough-to-crack seeds? Explain.

**The *Geospiza magnirostris*:** It has a large strong beak for breaking big tough seeds.

### Gizmo Warm-up

Darwin's finches are one of many types of animals on the Galápagos Islands that have unique **adaptations**, or traits that help an organism survive in its environment. The *Rainfall and Bird Beaks Gizmo™* allows you to explore how rainfall influences the range of beak shapes found in a single finch species.

1. The **beak depth** of a finch is the distance from the top of the beak to the bottom, as shown.
  - A. What is the current average beak depth in the Gizmo? **9.99mm**
  - B. Select the HISTOGRAM tab. Do all the finches have the same beak depth? **No, but the majority has a break depth of 10mm**
2. Click **Play** (▶) and let the simulation play for five years with average rainfall (5 inches/yr). Select the GRAPH tab and view the **Finches vs time** and **Beak depth vs time** graphs.
  - A. How does the finch population change? **Every year it drops, then comes back up.**
