Computational Counterpoint Worlds Octavio Alberto Agustín-Aquino, Julien Junod, Guerino Mazzola, 2015-07-08 The mathematical theory of counterpoint was originally aimed at simulating the composition rules described in Johann Joseph Fux's *Gradus ad Parnassum*. It soon became apparent that the algebraic apparatus used in this model could also serve to define entirely new systems of rules for composition generated by new choices of consonances and dissonances which in turn lead to new restrictions governing the succession of intervals. This is the first book bringing together recent developments and perspectives on mathematical counterpoint theory in detail. The authors include recent theoretical results on counterpoint worlds, the extension of counterpoint to microtonal pitch systems, the singular homology of counterpoint models, and the software implementation of contrapuntal models. The book is suitable for graduates and researchers. A good command of algebra is a prerequisite for understanding the construction of the model. *Foundations of Algorithms* Richard E. Neapolitan, Kumarss Naimipour, 2011. *Data Structures Theory of Computation* *Encyclopedia of Computer Science and Technology* Harry Henderson, 2009. Presents an illustrated A-Z encyclopedia containing approximately 600 entries on computer and technology related topics. *Foundations of Algorithms Using C++ Pseudocode* Richard E. Neapolitan, Kumarss Naimipour, 2004. *Foundations of Algorithms Using C Pseudocode* Third Edition offers a well balanced presentation on designing algorithms, complexity analysis of algorithms and computational complexity. The volume is accessible to mainstream computer science students who have a background in college algebra and discrete structures. To support their approach, the authors present mathematical concepts using standard English and a simpler notation than is found in most texts. A review of essential mathematical concepts is presented in three appendices. The authors also reinforce the explanations with numerous concrete examples to help students grasp theoretical concepts. **Handbook of Biosurveillance** Michael M. Wagner, Andrew W. Moore, Ron M. Aryel, 2011-04-28. Provides a coherent and comprehensive account of the theory and practice of real time human disease outbreak detection, explicitly recognizing the revolution in practices of infection control and public health surveillance. Reviews the current mathematical, statistical, and computer science systems for early detection of disease outbreaks. Provides extensive coverage of existing surveillance data. Discusses experimental methods for data measurement and evaluation. Addresses engineering and practical implementation of effective early detection systems. Includes real case studies. [Situation Assessment in Aviation](#) Jitendra R. Raol, Sudesh K. Kashyap, Lakshmi Shrinivasan, 2024-02-29. *Situation Assessment in Aviation* focuses on new aspects of soft computing technologies for the evaluation and assessment of situations in aviation scenarios. It considers technologies emerging from multisensory data fusion, MSDF, Bayesian networks, BN, and fuzzy logic, FL, to assist pilots in their decision making. Studying MSDF, BN, and FL from the perspective of their applications to the problem of situation assessment, the book discusses the development of certain soft technologies that can be further used for devising more sophisticated technologies for a pilot's

decision making when performing certain tasks airplane monitoring pair formation attack and threat It explains the concepts of situation awareness data fusion decision fusion Bayesian networks fuzzy logic type 1 and interval type 2 fuzzy logic The book also presents a hybrid technique by using BN and FL and a unique approach to the problem of situation assessment beyond visual range and air to air combat by utilizing building blocks of artificial intelligence AI for the future development of more advanced automated systems especially using commercial software The book is intended for aerospace R D engineers systems engineers aeronautical engineers and aviation training professionals It will also be useful for aerospace and electrical engineering students taking courses in Air Traffic Management Aviation Management Aviation Operations and Aviation Safety Systems Regression and Machine Learning for Education Sciences Using R Cody Dingsen,2024-11-01

This book provides a conceptual introduction to regression analysis and machine learning and their applications in education research It discusses their diverse applications including its role in predicting future events based on the current data or explaining why some phenomena occur These identified important predictors provide data based evidence for educational and psychological decision making Offering an applications oriented approach while mapping out fundamental methodological developments this book lays a sound foundation for understanding essential regression and machine learning concepts for data analytics The first part of the book discusses regression analysis and provides a sturdy foundation to understand the logic of machine learning With each chapter the discussion and development of each statistical concept and data analytical technique is presented from an applied perspective with the statistical results providing insights into decisions and solutions to problems using R Based on practical examples and written in a concise and accessible style the book is learner centric and does a remarkable job in breaking down complex concepts Regression and Machine Learning for Education Sciences Using R is primarily for students or practitioners in education and psychology although individuals from other related disciplines can also find the book beneficial The dataset and examples used in the book are from an educational setting and students will find that this text provides a good preparation ground for studying more statistical and data analytical materials Technology Development Tugrul U. Daim,Ramin Neshati,Russell Watt,James Eastham,2014-05-28

Design Recommendations for Intelligent Tutoring System - Volume 5: Assessment Methods Dr. Robert Sottolare,Dr.

Arthur Graesser, Dr. Xiangen Hu, Dr. Gregory Goodwin, 2017-08-28 This book is the fifth in a planned series of books that examine key topics e.g. learner modeling, instructional strategies, authoring, domain modeling, assessment, impact on learning, team tutoring, machine learning, and potential standards in intelligent tutoring system (ITS) design through the lens of the Generalized Intelligent Framework for Tutoring (GIFT). Sottolare Brawner, Goldberg, Sottolare Brawner, Sinatra, Johnston, 2017 GIFT is a modular, service-oriented architecture created to reduce the cost and skill required to author ITSs, manage instruction within ITSs, and evaluate the effect of ITS technologies on learning performance, retention, transfer of skills, and other instructional outcomes. Along with this volume, the first four books in this series: Learner Modeling (ISBN 978 0 9893923 0 3), Instructional Management (ISBN 978 0 9893923 2 7), Authoring Tools (ISBN 978 0 9893923 6 5), and Domain Modeling (978 0 9893923 9 6) are freely available at www.GIFTtutoring.org and on Google Play.

Rational Decisions in Organisations
Frédéric Adam, Dorota Kuchta, Stanisław Stanek, 2022-05-30 Managers in organisations must make rational decisions. Rational decision making is the opposite of intuitive decision making. It is a strict procedure utilising objective knowledge and logic. It involves identifying the problem to solve, gathering facts, identifying options and outcomes, analysing them, considering all the relationships, and selecting the decision. Rational decision making requires support methods and software tools. The identification of the problem to solve needs methods that would measure and evaluate the current situation. Identification and evaluation of options and analysis of the available possibilities involves analysis and optimisation methods. Incorporating intuition into rational decision making needs adequate methods that would translate ideas or observed behaviours into hard data. Communication, observation, and opinions recording is hardly possible today without adequate software. Information and data that form the input, intermediate variables, and the output must be stored, managed, and made accessible in a user-friendly manner.

Rational Decisions in Organisations: Theoretical and Practical Aspects presents selected recent developments in the support of the widely understood rational decision making in organisations, illustrated through case studies. The book shows not only the variety of perspectives involved in decision making but also the variety of domains where rational decision support systems are needed. The case studies present decision making by medical doctors, students, and managers of various universities, IT project teams, construction companies, banks, and small and large manufacturing companies. Covering the richness of relationships in which the decisions should and must be taken, the book illustrates how modern organisations operate in chains and networks, they have multiple responsibilities including social, legal, business, and ethical duties. Nowadays, managers in organisations can make transparent decisions and consider a multitude of stakeholders and their diverse features, incorporating diverse criteria, using multiple types and drivers of information, and decision making patterns, and referring to numerous lessons learned. As the book makes clear, the marriage of theoretical ideas with the possibilities offered by technology can make the decisions in organisations more rational and at the same time more human.

Desafios da implementação da Inteligência Artificial no sistema judicial
Eduardo Villa Coimbra Campos, 2023-10-31 A Intelig

Inteligência Artificial está na moda. O recente aumento na inovação e a acessibilidade de ferramentas generativas como o Chat GPT despertaram um interesse generalizado levando especialistas de diversas áreas a oferecerem as suas perspectivas sobre esses avanços. Isso inclui não apenas o público em geral mas também políticos filósofos empresários e lobistas profissionais. As opiniões vão desde aqueles que levantam preocupações sobre a ameaça potencial da IA para a humanidade mesmo considerando a uma ameaça existencial até outros que sublinham a complexidade de alcançar a verdadeira inteligência mecânica postulando que as máquinas não rivalizarão com a inteligência humana durante algum tempo. Nesse contexto uma abordagem pragmática construtiva e cativante envolve analisar como a IA irá remodelar a nossa vida quotidiana e potencialmente revolucionar as nossas rotinas de trabalho. O profundo impacto da IA não pode ser exagerado afetando praticamente todos os aspectos da existência humana desde os cuidados de saúde às finanças dos transportes educação. No entanto talvez nenhum domínio esteja tão intrinsecamente ligado aos princípios de justiça e equidade e estabilidade social como o sistema jurídico. Consequentemente a introdução da IA no domínio jurídico levanta questões práticas e filosóficas profundas que merecem um exame aprofundado. precisamente esta a missão que Eduardo Villa Coimbra Campos empreendeu nesta convincente e esclarecedora obra.
