**Directions:** Complete the exercises below on a separate sheet of paper. Scan and submit these tables and your graphs using the "Game Theory – Graded Exercises" link in Module 12.2.

- 1) Mr. Steven and Mr. Couple are playing "Odds and Evens". On the count of three, each player holds out their right hand with either an even or odd number of fingers showing. If the total number of fingers held out is even, Mr. Steven wins. If the total number of fingers held out is odd, Mr. Couple wins. The payoff matrix for this game is shown below.

		Steven	
		Even	Odd
Couple	Even	Lose, Win	Win, Lose
	Odd	Win, Lose	Lose, Win

- As described above, is this a simultaneous game or a sequential game? Explain briefly.
- If this were a sequential game, would timing matter? Would there be an advantage to going first or second? Explain briefly.
- Does either player have a dominant strategy in this game? Explain briefly.
- If you allowed the two parties to communicate, would they reach an agreement on the number of fingers to show? Explain briefly.

- 2) Sell-it-All Inc. and the ConglomerUS Corporation are two very large companies that are involved in a number of industries. Both are currently major players in the ball bearing industry. Unfortunately, with both of these companies in the industry, there is really more production capacity than there needs to be. As a result, prices, and profits, are relatively low. So, each firm is trying to decide whether to stay in the industry for the next fiscal year or exit. The profits, in millions, they would earn by following each strategy are listed below.

		ConglomerUS	
		Stay	Exit
Sell-it-All	Stay	\$10, \$14	\$16, \$18
	Exit	\$14, \$22	\$14, \$18

- Is this game symmetric? Explain briefly.
- If these firms were risk averse, which strategy would each of them choose? Explain briefly.
- If this were a sequential game, would timing matter? Would there be an advantage to going first or second? Explain briefly.
- Does either player have a dominant strategy? Explain briefly.

### **Eighty-nine Exercises with Solutions from Game Theory for the Social Sciences, Second and Revised Edition**

Hervé Moulin, 1986 *A Course In Game Theory* Thomas S Ferguson, 2020-07-20 Game theory is a fascinating subject We all know many entertaining games such as chess poker tic tac toe bridge baseball computer games the list is quite varied and almost endless In addition there is a vast area of economic games discussed in Myerson 1991 and Kreps 1990 and the related political games Ordeshook 1986 Shubik 1982 and Taylor 1995 The competition between firms the conflict between management and labor the fight to get bills through congress the power of the judiciary war and peace negotiations between countries and so on all provide examples of games in action There are also psychological games played on a personal level where the weapons are words and the payoffs are good or bad feelings Berne 1964 There are biological games the competition between species where natural selection can be modeled as a game played between genes Smith 1982 There is a connection between game theory and the mathematical areas of logic and computer science One may view theoretical statistics as a two person game in which nature takes the role of one of the players as in Blackwell and Girshick 1954 and Ferguson 1968 Games are characterized by a number of players or decision makers who interact possibly threaten each other and form coalitions take actions under uncertain conditions and finally receive some benefit or reward or possibly some punishment or monetary loss In this text we present various mathematical models of games and study the phenomena that arise In some cases we will be able to suggest what courses of action should be taken by the players In others we hope simply to be able to understand what is happening in order to make better predictions about the future

**Game Theory for the Social Sciences** Herve Moulin, 1986-10-01 The second edition of Herve Moulin s highly successful book outlines the fundamental concepts of game theory one of the most provocative and fruitful applications of mathematics to the human sciences and demonstrates its uses in economic and political discourse Thoroughly revised and now published with an accompanying workbook of 89 exercises this rigorous yet accessible text explains the uses of game theory in largely nontechnical terms Moulin carefully discusses the behavioral scenarios underlying the various equilibrium concepts He provides a self contained exposition of basic equilibrium concepts for strategic games perfect sophisticated equilibrium Nash s noncooperative example Aumann s strong and correlated example and several versions of the core The author is concerned less with mathematical refinements than with helping the reader understand the strategic stories backing these concepts His examples therefore give a fair account of the current game models used in economics politics and sociology Addressed here are oligopoly theory the provision of public goods auctions voting procedures and cost allocation problems as well as the classic prisoner s dilemma tic tac toe and Marienbad games Extremely popular in its original French edition and in its first English version Moulin s excellent introductory text is now more than ever the book to answer the essential questions about the application of game theory to the social sciences

**Cooperative Games, Solutions and Applications**  
Theo S. H. Driessen,2013-03-09 The study of the theory of games was started in Von Neumann 1928 but the development of the theory of games was accelerated after the publication of the classical book Theory of games and economic behavior by Von Neumann and Morgenstern 1944 As an initial step the theory of games aims to put situations of conflict and cooperation into mathematical models In the second and final step the resulting models are analysed on the basis of equitable and mathematical reasonings The conflict and or cooperative situation in question is generally due to the interaction between two or more individuals players Their interaction may lead up to several potential payoffs over which each player has his own preferences Any player attempts to achieve his largest possible payoff but the other players may also exert their influence on the realization of some potential payoff As already mentioned the theory of games consists of two parts a modelling part and a solution part Concerning the modelling part the mathematical models of conflict and cooperative situations are described The description of the models includes the rules the strategy space of any player potential payoffs to the players the preferences of each player over the set of all potential payoffs etc According to the rules it is either permitted or forbidden that the players communicate with one another in order to make binding agreements regarding their mutual actions
