Gazzaniga:

The History of Neuroscience in Autobiography Larry R. Squire, 2011-09-09 The seventh volume of *The History of Neuroscience in Autobiography* is a collection of autobiographical essays by distinguished senior neuroscientists in which they recount the events that shaped their lives and identify the mentors and colleagues who inspired them. The narratives provide a human dimension to the world of scientific research.

Handbook of Psychobiology Michael S. Gazzaniga, 2012-12-02 *Handbook of Psychobiology* presents an integrative overview of psychobiology and covers topics ranging from pathways in the central nervous system to principles of neuronal development, chemical pathways in the brain, the role of neurotransmitters in the regulation of behavior, and the biological basis of memory. Vertebrate sensory and motor systems are also discussed, along with the psychobiology of attention and neurological aspects of learning. This handbook consists of 21 chapters divided into four sections and opens with an introduction to neural mechanisms underlying the behavior of invertebrates, followed by a comparison of the visual behavior of humans and arthropods. The next sections explore the chemistry of behavior, the sensory and motor systems of vertebrates, and integration and regulation in the brain. Visual perception and visual coding, central auditory processing and auditory localization are considered together with motor coordination, neurophysiological aspects of dreaming, cognition and language. The final chapter is devoted to some of the philosophical issues surrounding perception. This monograph will be of value to psychologists, biologists, physiologists, and others in fields ranging from biochemistry and linguistics to invertebrate neurophysiology and perceptual phenomenology.

Foundations in Social Neuroscience John T. Cacioppo, 2002 A comprehensive survey of the growing field of social neuroscience.

The Mind's Past Michael S. Gazzaniga, 1998-05-07 Why does the human brain insist on interpreting the world and constructing a narrative? In this ground-breaking work, Michael S. Gazzaniga, one of the world's foremost cognitive neuroscientists, shows how our mind and brain accomplish the amazing feat of constructing our past—a process clearly fraught with errors of perception, memory, and judgment. By showing that the specific systems built into our brain do their work automatically and largely outside of our conscious awareness, Gazzaniga calls into question our everyday notions of self and reality. The implications of his ideas reach deeply into the nature of perception and memory, the profundity of human instinct, and the ways we construct who we are and how we fit into the world around us. Over the past thirty years, the mind sciences have developed a picture not only of how our brains are built but also of what they were built to do. The emerging picture is wonderfully clear and pointed, underlining William James's notion that humans have far more instincts than other animals. Every baby is born with circuits that compute information, enabling it to function in the physical world. Even what helps us to establish our understanding of social relations may have grown out of perceptual laws delivered to an infant's brain. Indeed, the ability to transmit culture, an act that is only part of the human repertoire, may stem from our many automatic and unique perceptual-motor processes that give rise to mental capacities such as belief and culture. Gazzaniga explains how the mind

interprets data the brain has already processed making us the last to know He shows how what we see is frequently an illusion and not at all what our brain is perceiving False memories become a part of our experience autobiography is fiction In exploring how the brain enables the mind Gazzaniga points us toward one of the greatest mysteries of human evolution how we become who we are [The New Cognitive Neurosciences](#) Michael S. Gazzaniga,2000 This second edition reflects the many advances that have taken place in this field particularly in imaging and recording techniques The majority of the chapters in this edition of *The Cognitive Neurosciences* are new and those from the first edition have been rewritten and updated **Inside Psychology** Patrick Rabbitt,2009 Psychology is a young science It has made great strides over the past 100 or so years to become one of the most rapidly growing of the sciences This text brings together some of the most influential psychologists from the past 50 years to consider just how we got to where we are in psychology and where we might be heading *The Consciousness Instinct* Michael S. Gazzaniga,2018-04-03 How do neurons turn into minds How does physical stuff atoms molecules chemicals and cells create the vivid and various worlds inside our heads The problem of consciousness has gnawed at us for millennia In the last century there have been massive breakthroughs that have rewritten the science of the brain and yet the puzzles faced by the ancient Greeks are still present This book puts the latest research in conversation with the history of human thinking about the mind giving a big picture view of what science has revealed about consciousness The idea of the brain as a machine first proposed centuries ago has led to assumptions about the relationship between mind and brain that dog scientists and philosophers to this day The author asserts that this model has it backward brains make machines but they cannot be reduced to one New research suggests the brain is actually a confederation of independent modules working together Understanding how consciousness could emanate from such an organization will help define the future of brain science and artificial intelligence and close the gap between brain and mind *The Neurology of Consciousness* Steven Laureys,Olivia Gosseries,Giulio Tononi,2015-08-12 The second edition of *The Neurology of Consciousness* is a comprehensive update of this ground breaking work on human consciousness the first book in this area to summarize the neuroanatomical and functional underpinnings of consciousness by emphasizing a lesional approach offered by the study of neurological patients Since the publication of the first edition in 2009 new methodologies have made consciousness much more accessible scientifically and in particular the study of disorders disruptions and disturbances of consciousness has added tremendously to our understanding of the biological basis of human consciousness The publication of a new edition is both critical and timely for continued understanding of the field of consciousness In this critical and timely update revised and new contributions by internationally renowned researchers edited by the leaders in the field of consciousness research provide a unique and comprehensive focus on human consciousness The new edition of *The Neurobiology of Consciousness* will continue to be an indispensable resource for researchers and students working on the cognitive neuroscience of consciousness and related disorders as well as for neuroscientists psychologists psychiatrists and
