**Greed, Self-Interest and the Shaping of Economics** Rudi Verburg, 2018-03-15 Since 2008 profound questions have been asked about the driving forces and self-regulating potential of the economic system political control and morality With opinion turning against markets and self-interest economists found themselves on the wrong side of the argument This book explores how the past of economics can contribute to today's debates The book considers how economics took shape as philosophers probed into the viability of commercial society and its potential to generate positive-sum outcomes It explains how dreams of affluence morality and happiness were built upon human greed and vanity It covers the bumpy road of the construction and reconstruction of this dream exploring the debate on the foundations conditions and limitations of the idea of the social utility of greed and vanity Revisiting this debate provides a rich source of ideas in rethinking economics and the basic beliefs concerning our economic system today

## **The Ambiguous Legacy of Socialist Modernist Architecture in Central and Eastern Europe** Mariusz

Sokołowicz, Aleksandra Nowakowska, Błażej Ciarkowski, 2023-04-28 This book examines the unique socialist modernist architecture built in the twentieth century in Central and Eastern Europe as a source of heritage and of existing and potential value for the present and future generations Due to the historical context in which it was created such architecture remains ambiguous On the one hand the wider public associates it with the legacy of the unpleasant period of the real socialist economic regime Yet on the other hand it is also a manifestation of social modernization and the promotion of a significant proportion of the population This book focuses particularly on concrete heritage a legacy of modernist architecture in Central and Eastern Europe and it was this material that enabled their rebuilding after World War II and modernization during the following decades The authors search for the value of modernist architecture and using case studies from Poland Bulgaria Northern Macedonia Lithuania and Slovenia verify to what extent this heritage is embedded in the local socio-economic milieu and becomes a basis for creating new values They argue that the challenge is to change the ways we think about heritage from looking at it from the point of view of a single monument to thinking in terms of a place with its own character and identity that builds its relation to history and its embeddedness in the local space Furthermore they propose that the preservation of existing concrete structures and adapting them to modern needs is of great importance for sustainability With increasing awareness of the issue of preserving post-war architectural heritage and the strategies of dissonant heritage management this multidisciplinary study will be of interest to architecture historians conservators heritage economists urban planners and architects

**Running the Numbers: A Practical Guide to Regional Economic and Social Analysis:**

**2014** John Quinterno, 2014-12-18 Through use of practical examples and a plainspoken narrative style that minimises the use of maths this book demystifies data concepts sources and methods for public service professionals interested in understanding economic and social issues at the regional level By blending elements of a general interest book a textbook and a reference book it equips civic leaders public administrators urban planners nonprofit executives philanthropists journalists and graduate students in various public affairs disciplines to wield social and economic data for the benefit of their communities While numerous books about quantitative research exist few focus specifically on the public sector Running the Numbers in contrast explores a wide array of topics of regional importance including economic output demographics business structure labour markets and income among many others To that end the book stresses practical applications minimises the use of maths and employs extended chapter length examples that demonstrate how analytical tools can illuminate the social and economic workings of actual American regions *From Political Economy to Economics*

Dimitris Milonakis, Ben Fine, 2009-01-13 Economics has become a monolithic science variously described as formalistic and autistic with neoclassical orthodoxy reigning supreme So argue Dimitris Milonakis and Ben Fine in this new major work of critical recollection The authors show how economics was once rich diverse multidimensional and pluralistic and unravel the processes that lead to orthodoxy's current predicament The book details how political economy became economics through the desocialisation and the dehistoricisation of the dismal science accompanied by the separation of economics from the other social sciences especially economic history and sociology It is argued that recent attempts from within economics to address the social and the historical have failed to acknowledge long standing debates amongst economists historians and other social scientists This has resulted in an impoverished historical and social content within mainstream economics The book ranges over the shifting role of the historical and the social in economic theory the shifting boundaries between the economic and the non economic all within a methodological context Schools of thought and individuals that have been neglected or marginalised are treated in full including classical political economy and Marx the German and British historical schools American institutionalism Weber and Schumpeter and their programme of Social konomik and the Austrian school At the same time developments within the mainstream tradition from marginalism through Marshall and Keynes to general equilibrium theory are also scrutinised and the clashes between the various camps from the famous Methodenstreit to the fierce debates of the 1930s and beyond brought to the fore The prime rationale underpinning this account drawn from the past is to put the case for political economy back on the agenda This is done by treating economics as a social science once again rather than as a positive science as has been the inclination since the time of Jevons and Walras It involves transcending the boundaries of the social sciences but in a particular way that is in exactly the opposite direction now being taken by economics imperialism Drawing on the rich traditions of the past the reintroduction and full incorporation of the social and the historical into the main corpus of political economy will be possible in the future **Principles of**
