The second section goes on to discuss water contamination and health risks caused by toxic elements, radiological contaminants, microplastics, and nanoparticles, and pharmaceutical and personal care products. This book concludes with a section exploring efficient, low-cost treatment technologies and remediation strategies that remove toxic pollutants from water. Contamination of Water incorporates both theoretical and practical information that will be useful for researchers, professors, graduate students, and professionals working on water contamination, environmental and health impacts, and the management and treatment of water resources. Provides practical case studies of various types and sources of contamination. Discusses inorganic and organic contaminants and their impact on human health.
