

Manage Linux Disk Partition with fdisk Command

This tutorial explains how to manage MBR disk partition (Primary, Extended and Logical) and GPT disk partition in Linux from fdisk command with practical examples. Learn how to create, list, format, mount (temporary and permanent), remove and delete MBR & GPT partitions step by step in detail.

For this tutorial I assume that you have either non-partitioned disk space or have a separate disk for exercise. If you are using virtual program (such as VMware or Virtual Box) for the practice, I suggest you to add a new virtual hard disk. To learn how to add new virtual disk in VMware please see the first part of this tutorial.

This tutorial is the second part of our article "Linux Disk Management Explained in Easy Language with Examples". You can read other parts of this article here.

We can list all attached hard disks with `fdisk -l` command.

```
[root@server ~]# fdisk -l
Disk /dev/sdc: 2147 MB, 2147483648 bytes, 4194304 sectors
Units = sectors of 1 * 512 = 512 bytes non-partitioned disk
Sector size (logical/physical): 512 bytes / 512 bytes
I/O size (minimum/optimal): 512 bytes / 512 bytes

Disk /dev/sdb: 2147 MB, 2147483648 bytes, 4194304 sectors
Units = sectors of 1 * 512 = 512 bytes non-partitioned disk
Sector size (logical/physical): 512 bytes / 512 bytes
I/O size (minimum/optimal): 512 bytes / 512 bytes

Disk /dev/sda: 14.0 GB, 13958543712 bytes, 27262976 sectors
Units = sectors of 1 * 512 = 512 bytes partitioned disk
Sector size (logical/physical): 512 bytes / 512 bytes
I/O size (minimum/optimal): 512 bytes / 512 bytes

Disk label type: dos
Disk identifier: 0x00015052 this disk contains partition table

   Device Boot      Start         End      Blocks   Id  System
/dev/sda1 *          2048     1026047      512000   83  Linux
/dev/sda2             1026048     24594431     11784192   8e  Linux LVM
```

As above figure shows there are two un-partitioned disks `/dev/sdb` and `/dev/sdc` available. To figure out which disk we added recently check its sequence number. Recently added disk will be the last disk in sequence (sda, sdb and sdc). In our example it is `/dev/sdc`. We will use this disk for the practice.

Backup before start

We should always take the backup of associate files before making any system change. Backup copy allows us to revert in original state if anything goes wrong. Run following commands to create a backup copy of files which will change in this practice.

Manage Linux Disk Partition With Fdisk Command Rhce
