Spring Boot + AngularJS + Spring Data + JPA CRUD App

In this post we will be developing a full-blown CRUD application using Spring Boot, AngularJS, Spring Data, JPA/Hibernate and MySQL, learning the concepts in details along the way. This application can as well serve as a base/starting point for your own application. In addition, we will also use the notion of profiles to deploy the application into two different databases [H2 & MySQL] to emulate the local and production environment, to be more realistic. Let's get going.

Following technologies stack being used:

- Spring Boot 1.4.3.RELEASE

Spring 5.0 Projects Nilang Patel, 2019-02-28 Discover the latest features of Spring framework by building robust fast and reactive web applications Key Features Take advantage of all the

features of Spring 5.0 with third party tools to build a robust back end. Secure Spring based web application using Spring Security framework with LDAP and OAuth protocol. Develop robust and scalable microservice based applications on Spring Cloud using Spring Boot. Book Description: Spring makes it easy to create RESTful applications, merge with social services, communicate with modern databases, secure your system, and make your code modular and easy to test. With the arrival of Spring Boot, developers can really focus on the code and deliver great value with minimal contour. This book will show you how to build various projects in Spring 5.0 using its features and third party tools. We'll start by creating a web application using Spring MVC, Spring Data, the World Bank API for some statistics on different countries, and MySQL database. Moving ahead, you'll build a RESTful web services application using Spring WebFlux framework. You'll be then taken through creating a Spring Boot based simple blog management system which uses Elasticsearch as the data store. Then you'll use Spring Security with the LDAP libraries for authenticating users and create a central authentication and authorization server using OAuth 2 protocol. Further, you'll understand how to create Spring Boot based monolithic application using JHipster. Toward the end, we'll create an online book store with microservice architecture using Spring Cloud and Netflix OSS components and a task management system using Spring and Kotlin. By the end of the book, you'll be able to create coherent and flexible real time web applications using Spring Framework. What you will learn: Build Spring based application using Bootstrap template and JQuery. Understand the Spring WebFlux framework and how it uses Reactor library. Interact with Elasticsearch for indexing, querying, and aggregating data. Create a simple monolithic application using JHipster. Use Spring Security and Spring Security LDAP and OAuth libraries for Authentication. Develop a microservice based application with Spring Cloud and Netflix. Work on Spring Framework with Kotlin. Who this book is for: This book is for competent Spring developers who wish to understand how to develop complex yet flexible applications with Spring. You must have a good knowledge of Java programming and be familiar with the basics of Spring. Together we will write a production ready microservice with a REST API in just a few hours. All starting from having zero experience with Spring at all. Revised and extended 3rd edition. Update Using Spring Boot 2.1.8 RELEASE version. Our guides give you brief lessons on a single topic to get you started in no time. We leave the fluff out so you can focus and learn better and faster. Stop wasting hours of your life watching video courses or reading boring compendiums. Use our guide and save your precious time and be way ahead of your competitors on that next big project. We build a real application less than 850 lines of code though using a standard Maven project structure together and I will explain you the steps and libraries involved on the go. You must know Java. You learn best by coding. The way I love learning too. And not by reading fluffy compendiums or watching 10 hours and more of videos. Sure you can do that but any developer following my guide will be way ahead of you before you are even halfway through that video course. What you will build: We build a Microservice for

storing comments and providing a REST Interface for interacting with the data The sample application is modeled after a real production application to guide you through building your first Spring Boot application What you will learn What problem the Spring Framework actually solves The basics of the Spring Framework aka Core How to build a microservice with Spring Boot 2 How to work with a relational database using the Spring Data JPA Framework How to write the REST API using Spring MVC How to create a service layer and integrate a legacy library using its own Spring ApplicationContext in an XML file How to test the application A simple way to secure your application How to use monitoring and health check out of the box with Spring Boot How to deploy your application How to navigate in the project with Maven You must have experience with Java as we are not covering Java basics Everything else we use is covered in the guide If you have questions do not hesitate to contact me using the email address at the end of the book I ll answer your questions and improve the book with your feedback Promised
