Automatic extraction and processing of document

references Kathrin Eichler,2010-10-13 Master s Thesis from the year 2007 in the subject Computer Science Applied grade 1
0 University of Sunderland School of Computing and Technology language English abstract While reading documents you
often encounter text passages advising you to refer to other documents for more information about a specific topic These
references to other documents are particularly common in technical documents written for the sole purpose of providing the
reader with as much relevant information as possible without rephrasing information that can be found elsewhere Knowing
how the documents in a system are interrelated i e which other documents a document refers to or is referred by can be
extremely helpful when trying to get access to relevant information A typical example of such a knowledge net providing
information about document relations is CiteSeer a digital library of academic literature For each document in the library
system CiteSeer displays lists of related documents such as a list of documents that the current document cites as well as a
list of documents that the current document is cited by The assumption that inspired this thesis is that such lists are not only
helpful when reading academic literature but could also assist a reader of technical documents stored in a company s
document management system The idea was thus to extend an existing document management system by displaying for each
document stored in the system a list of links to documents that the current document refers to As information about how the
documents in this system are interrelated was not available the focus of the project underlying this thesis was on the first
step towards solving this task automatically analyzing documents in order to extract names of related documents Once all
document names mentioned in a document have been extracted the next step would then be to search for these documents in
the system s database and in case they have been successfully found create links to the respective documents The outcome of
the project was a system that performs the extraction task It is based on Conditional Random Fields a machine learning
technique introduced by Lafferty et al 2001 and is able to extract document names from unseen documents achieving high
precision scores 88% and acceptable recall scores 65% on a test dataset The implementation is based on a Java package
provided by Sarawagi Cohen 2005 which was adapted and extended to suit the nature of the task As the approach is based
on supervised learning the project also involved the generation of appropriate training data *Proceedings - Project
Management Institute* Project Management Institute. Seminar/Symposium,1992 Fundamentals of Project Management
Rory Burke,2010 Fundamentals of Project Management explains how to use the latest project management planning and
control tools and techniques used by the planning software the APM BoK 5ed the PMBOK 4ed and the unit standards level 4
The text uses plenty of worked examples and exercises to explain how to use all the body of knowledge topics and
particularly the Project Management Process and the Project Management Plan Target Market Project managers new to
project management who are managing projects of limited complexity Project team members who are responsible for
performing all the calculations reporting and the administration functions Contractors suppliers and consultants who
participate in projects Support Material An INSTRUCTOR GUIDE and POWERPOINTS SLIDES are available upon request
