young children's technology use yet technological advancements continue to occur faster than researchers can keep up with. Accordingly, despite touch screen tablets entering society more than 5 years ago, we are in the infancy of research concerning interactive media and children. The topic has gained traction in the past couple of years. For example, theoretical papers have discussed how interactive media activities differ from physical toys and passive media (Christakis, 2014) and how educational apps development should utilize the four pillars of learning (Hirsh-Pasek et al., 2015). Yet there has been little experimental research published on young children and touch screen use.
