Information Modeling the Autodesk Revit 2026 Fundamentals for MEP guide Part 1 and Part 2 has been designed to teach the concepts and principles of creating 3D parametric models of MEP systems from engineering design through construction documentation. This guide is intended to introduce users to the user interface and the basic HVAC electrical and piping/plumbing components that make Autodesk Revit a powerful and flexible engineering modeling tool. The guide will also familiarize users with the tools required to create and print the parametric model. The examples and practices are designed to take users through the basics of a full MEP project from linking in an architectural model to construction documents.

Topics Covered in Part 2: Connecting and testing basic systems; Creating pipe systems with plumbing fixtures and pipes; Creating duct systems with air terminals, mechanical equipment, and ducts; Creating advanced HVAC and plumbing systems with automatic duct and piping layouts; Creating electrical circuits with electrical equipment, devices, and light fixtures; and adding cable trays and conduits. Setting up sheets and placing and modifying views on sheets; Working with dimensions, text annotations, and legends; Adding tags and working with schedules; Setting up detail views and adding detail components.

Prerequisites: Access to the 2026 version of the software to ensure compatibility with this guide. Future software updates that are released by Autodesk may include changes that are not reflected in this guide. The practices and files included with this guide are not compatible with prior versions (e.g., 2025). This guide introduces the fundamental skills you need to learn the Autodesk Revit MEP software. It is highly recommended that users have experience and knowledge in MEP engineering and its terminology. It is recommended that users have a standard three-button mouse to successfully complete the practices in this guide.

As the title "Step by Step" of this book implies, readers will exercise the software from the beginning to the end of the modeling. That's how you get the whole picture of the entire story and learn the software. This book covers five major disciplines of MEP systems: Mechanical, Hydronic Piping, Electrical, Plumbing, and Fire Protection. Besides the modeling of 3D Duct Works, Conduits, and Piping, it also covers Energy Analysis, Lighting Calculation, Schedule Creations, and many MEP-related Properties. The last two are really the heart of Building Information Modeling. The author also included a bonus chapter of Architectural Modeling that will give the reader extra background and experience of the software. I wrote this book in two versions: Imperial and Metric. Readers can choose the one to suit their needs. With 1000 steps, 1000 figures, and 60 exercise files, download from the author's Google Drive to guide you to complete the entire modeling of a building; there is no reason you cannot succeed.
