

FIXED POINT THEOREMS FOR CONTRACTION MAPPINGS WITH APPLICATIONS TO NONEXPANSIVE AND PSEUDO-CONTRACTIVE MAPPINGS

JUAN A. GATICA AND W. A. KIRK¹

ABSTRACT. The principal result states that if H is a closed and convex subset of a Banach space X , G a subset of H open relative to H with the origin 0 in G , and if $U: \bar{G} \rightarrow H$ is a contraction mapping satisfying (i) $U(x) = \alpha x$ implies $\alpha \leq 1$ for $x \neq 0$ in the boundary of G relative to the closed subspace \mathcal{A} of X spanned by H , then U has a fixed point in \bar{G} . This result is then used to obtain some fixed point theorems for non-expansive and pseudo-contractive mappings. It may be compared with a recent result of W. V. Petryshyn for "condensing mappings," a class of mappings more general than the contraction mappings. Petryshyn has shown that if G is bounded with 0 in the interior of G and if $U: \bar{G} \rightarrow X$ is a condensing mapping satisfying $U(x) = \alpha x$ implies $\alpha \leq 1$ for x on the boundary of G , then U has a fixed point in \bar{G} . This paper shows that for contraction mappings G need not be bounded, and under certain circumstances, 0 may be on the boundary of G .

1. Introduction. Although we restrict our attention in this paper to contraction, nonexpansive, and pseudo-contractive mappings, we will compare our principal results with a recent theorem of W. V. Petryshyn for "condensing mappings." We begin with a description of Petryshyn's result.

For a bounded subset A of a real Banach space X , let $\gamma(A)$ denote the measure of noncompactness of A [17], that is,

$$\gamma(A) = \inf\{d : A \text{ can be covered by a finite number of sets each of diameter } \leq d\}.$$

Following [22] we say that a continuous mapping $T: G \rightarrow X$, $G \subset X$, is *condensing* if for every bounded set $A \subset G$ such that $\gamma(A) \neq 0$ it is the case that $\gamma(T(A)) < \gamma(A)$. This class of mappings includes mappings of the form $T = S + C$ where S is a contraction mapping (i.e., there exists $k < 1$ such that $\|S(x) - S(y)\| \leq k\|x - y\|$ for all $x, y \in G$) and C a compact mapping of G into X .

Some Applications of Contraction Mappings and a Fixed Point Theorem William E. McBride, 1964 **Characterization Theorems Inspired By the Higher Order Banach Mapping II: Some Results in Multiplicative Cone b-Metric Space** Clement Ampadu, 2016-08-22 Serves as collateral reading for people interested in fixed point theorems for contractive type mappings Researchers in fixed point theory and their students will find it a delight to read Contains many exercises for further exploration Construction of theorems and proof writing is developed *Handbook of Metric Fixed Point Theory* W.A. Kirk, B. Sims, 2013-04-17 Metric fixed point theory encompasses the branch of fixed point theory which metric conditions on the underlying space and or on the mappings play a fundamental role In some sense the theory is a far reaching outgrowth of Banach's contraction mapping principle A natural extension of the study of contractions is the limiting case when the Lipschitz constant is allowed to equal one Such mappings are called nonexpansive Nonexpansive mappings arise in a variety of natural ways for example in the study of holomorphic mappings and hyperconvex metric spaces Because most of the spaces studied in analysis share many algebraic and topological properties as well as metric properties there is no clear line separating metric fixed point theory from the topological or set theoretic branch of the theory Also because of its metric underpinnings metric fixed point theory has provided the motivation for the study of many geometric properties of Banach spaces The contents of this Handbook reflect all of these facts The purpose of the Handbook is to provide a primary resource for anyone interested in fixed point theory with a metric flavor The goal is to provide information for those wishing to find results that might apply to their own work and for those wishing to obtain a deeper understanding of the theory The book should be of interest to a wide range of researchers in mathematical analysis as well as to those whose primary interest is the study of fixed point theory and the underlying spaces The level of exposition is directed to a wide audience including students and established researchers **On Fixed Point Theorems in Some Types of Spaces** Abdullah Alaa, Alaa Abdullah, Salwa Abd, 2014-03-11 In this book point theorems are proved for independent types of contraction mappings and also give a generalization of these cases by Ćirić's contraction mapping is given All these results are proved in complete orbitally complete or chainable orbitally complete G metric space in two states globally or locally Secondly the concepts of compatible semi compatible or weakly commuting are applied to prove common fixed point theorems for two mappings Also other results are formulated without any commuting condition to get common fixed points for two or more than two mappings Finally the new concept of G distance are presented in this book and used to introduce some important results in G metric space such as fixed point theorems non convex minimization theorem variational principle generalization of Ćirić's theorem and infinite fixed points Ćirić's theorem **Advanced Topics in Mathematical Analysis** Michael Ruzhansky, Hemen Dutta, 2019-01-08 Advanced Topics in Mathematical Analysis is aimed at researchers graduate students and educators with an interest in mathematical analysis and in mathematics more generally The book aims to present theory methods and
