Starting Out Early Objects Edition

Kathleen R. Gilbert

Starting Out Early Objects Edition:

Starting Out with C++ Tony Gaddis, Judy Walters, Godfrey Muganda, 2010-04-02 Tony Gaddis's accessible step by step presentation helps beginning students understand the important details necessary to become skilled programmers at an introductory level. Gaddis motivates the study of both programming skills and the C programming language by presenting all the details needed to understand the how and the why but never losing sight of the fact that most beginners struggle with this material. His approach is both gradual and highly accessible, ensuring that students understand the logic behind developing high quality programs. In **Starting Out with C Early Objects**, Gaddis covers objects and classes early, after functions and before arrays and pointers. As with all Gaddis texts, clear and easy to read code listings, concise and practical real world examples, and an abundance of exercises appear in every chapter. This text is intended for either a one semester accelerated introductory course or a traditional two semester sequence covering C programming.

Starting Out with Java Tony Gaddis, 2017-02-17 For courses in Java programming. A clear and student friendly way to teach the fundamentals of Java. **Starting Out with Java Early Objects 6th Edition** features Tony Gaddis's accessible step by step presentation which helps beginning students understand the important details necessary to become skilled programmers at an introductory level. Gaddis motivates the study of both programming skills and the Java programming language by presenting all the details needed to understand the how and the why but never losing sight of the fact that most beginners struggle with this material. His approach is gradual and highly accessible, ensuring that students understand the logic behind developing high quality programs. In **Starting Out with Java Early Objects**, Gaddis looks at objects, the fundamentals of classes and methods before covering procedural programming. As with all Gaddis texts, clear and easy to read code listings, concise and practical real world examples, and an abundance of exercises appear in every chapter. Updates to the 6th Edition include revised improved problems throughout and three new chapters on JavaFX. Also Available with MyLab Programming. MyLab™ Programming is an online learning system designed to engage students and improve results. MyLab Programming consists of programming exercises correlated to the concepts and objectives in this book. Through practice exercises and immediate personalized feedback, MyLab Programming improves the programming competence of beginning students who often struggle with the basic concepts of programming languages. School Entry Christoph Weber, Martin Schöfl, Susanne Seifert, Natalie Förster, 2025-12-01 School entry is a critical life event for young children. Students begin this new phase of their lives with very different abilities due to their individual characteristics, previous experiences, and education. While some children hardly know any letters or numbers, others can already read, write, and calculate quite fluently. To optimally support young learners according to their respective starting conditions, teachers must recognize students' learning prerequisites and adapt instruction to students' needs. To this end, both valid and economical assessments as well as effective and differentiated interventions are needed. This Research Topic addresses new developments in early assessments and assessment-based interventions around the time of school entry, from the last year before enrollment until second grade. In particular, this Research Topic aims to bring together research that directly contributes to assessing children's difficulties and providing evidence-based support. We highly welcome new innovative approaches from the fields of education, didactics, and psychology that focus on the assessment and assessment-based instruction in reading, writing, and maths. Any empirical studies that help to improve the assessment and assessment-based interventions for the competencies mentioned are welcome. We are looking for empirical quantitative or qualitative studies dealing with the target group of children around the age of school entry, last year of kindergarten to second grade elementary school, that include at least one of the following topics: the presentation or testing of new assessment procedures that focus on performance in and prerequisites for reading, writing, and maths; assessment-based interventions, both whole class or individual approaches in reading, writing, and maths; the co-development of sub-skills in reading, writing, and maths; and consequences for assessment and intervention. Please note that manuscripts without prior submission of an abstract will not be considered for the research topic.

Space, Imagination and the Cosmos from Antiquity to the Early Modern Period Frederik A. Bakker, Delphine Bellis, Carla Rita Palmerino, 2019-02-05

This volume provides a much-needed, historically accurate narrative of the development of theories of space up to the beginning of the eighteenth century. It studies conceptions of space that were implicitly or explicitly entailed by ancient, medieval, and early modern representations of the cosmos. The authors reassess Alexandre Koyr's groundbreaking work *From the Closed World to the Infinite Universe* (1957) and trace the permanence of arguments to be found throughout the Middle Ages and beyond. By adopting a long timescale, this book sheds new light on the continuity between various cosmological representations and their impact on the ontology and epistemology of space. Readers may explore the work of a variety of authors, including Aristotle, Epicurus, Henry of Ghent, John Duns Scotus, John Wyclif, Peter Auriol, and Nicholas Bonet.

Francisco Suarez Francesco Patrizi Giordano Bruno Libert Froidmont Marin Mersenne Pierre Gassendi Gottfried Wilhelm Leibniz and Samuel Clarke We see how reflections on space imagination and the cosmos were the product of a plurality of philosophical traditions that found themselves confronted with and enriched by various scientific and theological challenges which induced multiple conceptual adaptations and innovations This volume is a useful resource for historians of philosophy those with an interest in the history of science and particularly those seeking to understand the historical background of the philosophy of space
