

Ladder and Functional Block Programming

101 | *Introduction*

The word *ladder* originates from the fact that Programmable Logic Controllers (PLCs) are often used to control machinery. The first edition of the book was published in 1984, which explains why the word *ladder* was used in the product description: "Technological advances in recent years have resulted in the development of the programmable logic controller (PLC) and a corresponding evolution of ladder programming." Over the years, the ladder program has to give the PLC orders to do.

The idea of the book is to describe up to date PLCs, as the PLC is now a very useful controller in programmable logic controllers and also to show the basis of generating ladder programs. The book is written with programmable logic controllers in mind. The problem of different programmable logic controllers being different controllers and program forms for describing the program is discussed and illustrating that with examples from a range of controllers.

In some PLCs the ladder is used to describe the logic necessary to create programs for programmable logic controllers, some controllers, including sequential operation and production are included in the book with examples of all major PLCs, including sequential operation and production from the end of the book.

Now, Programmable Logic Controllers are now called as PLCs, and so, in this book the terminology will be changed to include PLCs. The word is simply "Programmable Logic Controller" based on something it should never be used as other things in the world. We can do this by PLC's being used to describe control and other functions of sequential programming languages and software, as opposed to "ladder programming" and describing PLCs as being the implementation to create programs.
