Calibration and Reliability in Groundwater Modelling Yanxin Wang, 2011 The usefulness of the predictive simulations obtained with groundwater models is often hampered by the inability to indicate and preferably quantify the reliability of the model results Uncertainty in model predictions stems primarily from a number of errors relating to the model formulation such as inadequate concept of processes and interactions inadequate description of processes and interactions inadequate sense of spatial and temporal variability inadequate description of the state of the system incorrect coefficient values and improper specification of the error bounds In recent years much research has been carried out resulting in a variety of approaches that can be followed to incorporate the information about these errors into modelling process Various techniques have been developed to assess the confidence levels of model predictions so that users can account for uncertainties in the decision making process This publication contains 52 papers the ModelCARE 90 conference held in The Hague September 1990 *ModelCARE99*, 2000 International Conference on Calibration and Reliability in Groundwater Modelling Karel Kovar, 1990 *Calibration and Reliability in Groundwater Modelling from Uncertainty to Decision Making*, 2005

communicate errors in simulated results that are often used to make important societal decisions Most of the methods are based on linear and nonlinear regression theory Fourteen guidelines show the reader how to use the methods advantageously in practical situations Exercises focus on a groundwater flow system and management problem enabling readers to apply all the methods presented in the text The exercises can be completed using the material provided in the book or as hands on computer exercises using instructions and files available on the text s accompanying Web site Throughout the book the authors stress the need for valid statistical concepts and easily understood presentation methods required to achieve well tested transparent models Most of the examples and all of the exercises focus on simulating groundwater systems other examples come from surface water hydrology and geophysics The methods and guidelines in the text are broadly applicable and can be used by students researchers and engineers to simulate many kinds systems
