Mathematical Modelling of Chemical Processes Rabinovich, 1991 This text examines problems in modelling and optimization of heterogeneous catalysis polymerization processes and transport phenomena The book features many original results many of which have been published only in Russian publications Chemical Engineering Education ,1992

Online Optimization of Large Scale Systems Martin Grötschel, Sven O. Krumke, Joerg Rambau, 2013-03-14 In its thousands of years of history mathematics has made an extraordinary career It started from rules for bookkeeping and computation of areas to become the language of science Its potential for decision support was fully recognized in the twentieth century only vitally aided by the evolution of computing and communication technology Mathematical optimization in particular has developed into a powerful machinery to help planners Whether costs are to be reduced profits to be maximized or scarce resources to be used wisely optimization methods are available to guide decision making Optimization is particularly strong if precise models of real phenomena and data of high quality are at hand often yielding reliable automated control and decision procedures But what if the models are soft and not all data are around Can mathematics help as well This book addresses such issues e.g. problems of the following type An elevator cannot know all transportation requests in advance In which order should it serve the passengers Wing profiles of aircrafts influence the fuel consumption Is it possible to continuously adapt the shape of a wing during the flight under rapidly changing conditions Robots are designed to accomplish specific tasks as efficiently as possible But what if a robot navigates in an unknown environment Energy demand changes quickly and is not easily predictable over time Some types of power plants can only react slowly **Mathematical**

Zaikov, A. K. Haghi, 2018-08-06 This book highlights many of the latest developments and trends in engineering chemistry research and describes the respective tools to characterize and predict properties and behavior of materials The book provides original theoretical and important experimental results which use non routine methodologies and presents chapters on novel applications of more familiar experimental techniques and analyses of composite problems which indicate the need for new experimental approaches presented Technical and technological development demands the creation of new materials that are stronger more reliable and more durable i.e. materials with new properties This volume presents new research that will help lead to new and better materials Each chapter describes the principle of the respective method as well as the detailed procedures of experiments with examples of actual applications presented Thus readers will be able to apply the concepts as described in the book to their own experiments Experts in each of the areas covered have reviewed the state of the art thus creating a

book that will be useful to readers at all levels in academic industry and research institutions Engineers polymer scientists and technicians will find this volume useful in selecting approaches and techniques applicable to characterizing molecular compositional rheological and thermodynamic properties of elastomers and plastics *The Solution of Equations* Mansfield Merriman,1896 *General principles of organic syntheses* Petr Petrovich Aleksieev,1906 Journal of the Royal Society of Arts Royal Society for the Encouragement of Arts, Manufactures and Commerce,1898 Ice Formation Howard Turner Barnes,1906 **Beet-sugar Manufacture** Hermann Claassen,1906 **Qualitative analysis.-v.2.
