variety of shapes sizes and dimensions Bend them into Moebius strips fold them into cubes and wrap them around spheres Stretch them into other dimensions squeeze them into arbitrary outlines and tile them in a dizzying variety of ways From twelve little algorithms you ll discover a vast reservoir of ideas and inspiration From video games to movies mazes are ubiquitous Explore a dozen algorithms for generating these puzzles randomly from Binary Tree to Eller s each copiously illustrated and accompanied by working implementations in Ruby You ll learn their pros and cons and how to choose the right one for the job You ll start by learning six maze algorithms and transition from making mazes on paper to writing programs that generate and draw them You ll be introduced to Dijkstra s algorithm and see how it can help solve analyze and visualize mazes Part 2 shows you how to constrain your mazes to different shapes and outlines such as text circles hex and triangle grids and more You ll learn techniques for culling dead ends and for making your passages weave over and under each other Part 3 looks at six more algorithms taking it all to the next level You ll learn how to build your mazes in multiple dimensions and even on curved surfaces Through it all you ll discover yourself brimming with ideas the best medicine for programmer s block burn out and the grayest of days By the time you re done you ll be energized and full of maze related possibilities What You Need The example code requires version 2 of the Ruby programming language Some examples depend on the ChunkyPNG library to generate PNG images and one chapter uses POV Ray version 3 7 to render 3D graphics

Parallel Computing: On the Road to Exascale Gerhard R. Joubert,Hugh Leather,Mark Parsons,Frans Peters,2016-04-15 As predicted by Gordon E Moore in 1965 the performance of computer processors increased at an exponential rate Nevertheless the increases in computing speeds of single processor machines were eventually curtailed by physical constraints This led to the development of parallel computing and whilst progress has been made in this field the complexities of parallel algorithm design the deficiencies of the available software development tools and the complexity of scheduling tasks over thousands and even millions of processing nodes represent a major challenge to the construction and use of more powerful parallel systems This book presents the proceedings of the biennial International Conference on Parallel Computing ParCo2015 held in Edinburgh Scotland in September 2015 Topics covered include computer architecture and performance programming models and methods as well as applications The book also includes two invited talks and a number of mini symposia Exascale computing holds enormous promise in terms of increasing scientific knowledge acquisition and thus contributing to the future well being and prosperity of mankind A number of innovative approaches to the development and use of future high performance and high throughput systems are to be found in this book which will be of interest to all those whose work involves the handling and processing of large amounts of data   Dart 1 for Everyone Chris Strom,2014-11-15 Psst You re not stuck with JavaScript anymore Google s Dart language makes programming for the Web simpler faster and more powerful With version 1 0 in 2013 and an ECMA standard in 2014 Dart is ready to radically change web development for the better And Dart 1 for Everyone has got you covered Completely updated for Dart 1 and the ECMA
