Vadivu, 2022-04-26 This book gathers selected papers presented at the International Conference on Deep Learning Computing and Intelligence ICDCI 2021 organized by Department of Information Technology SRM Institute of Science and Technology Chennai India during January 7 8 2021 The conference is sponsored by Scheme for Promotion of Academic and Research Collaboration SPARC in association with University of California UC Davis and SRM Institute of Science and Technology The book presents original research in the field of deep learning algorithms and medical imaging systems focusing to address issues and developments in recent approaches algorithms mechanisms and developments in medical imaging

**Data-Centric Security in Software Defined Networks (SDN)** Marek Amanowicz, Sebastian Szwaczyk, Konrad Wrona, 2024-04-11 The book focuses on applying the data centric security DCS concept and leveraging the unique capabilities of software defined networks SDN to improve the security and resilience of corporate and government information systems used to process critical information and implement business processes requiring special protection As organisations increasingly rely on information technology cyber threats to data and infrastructure can significantly affect their operations and adversely impact critical business processes Appropriate authentication authorisation monitoring and response measures must be implemented within the perimeter of the system to protect against adversaries However sophisticated attackers can compromise the perimeter defences and even remain in the system for a prolonged time without the owner being aware of these facts Therefore new security paradigms such as Zero Trust and DCS aim to provide defence under the assumption that the boundary protections will be breached Based on experience and lessons learned from research on the application of DCS to defence systems the authors present an approach to integrating the DCS concept with SDN They introduce a risk aware approach to routing in SDN enabling defence in depth and enhanced security for data in transit The book describes possible paths for an organisation to transition towards DCS

indicating some open and challenging issues requiring further investigation To allow interested readers to conduct detailed studies and evaluate the exemplary implementation of DCS over SDN the text includes a short tutorial on using the emulation environment and links to the websites from which the software can be downloaded *Software Defined Networks, 2nd Edition* Paul Goransson, Chuck Black, Timothy Culver, 2016 *Software Defined Networks A Comprehensive Approach Second Edition* provides in depth coverage of the technologies collectively known as Software Defined Networking SDN The book shows how to explain to business decision makers the benefits and risks in shifting parts of a network to the SDN model when to integrate SDN technologies in a network and how to develop or acquire SDN applications In addition the book emphasizes the parts of the technology that encourage opening up the network providing treatment for alternative approaches to SDN that expand the definition of SDN as networking vendors adopt traits of SDN to their existing solutions Since the first edition was published the SDN market has matured and is being gradually integrated and morphed into something more compatible with mainstream networking vendors This book reflects these changes with coverage of the OpenDaylight controller and its support for multiple southbound protocols the Inclusion of NETCONF in discussions on controllers and devices expanded coverage of NFV and updated coverage of the latest approved version 1.5.1 of the OpenFlow specification Contains expanded coverage of controllers Includes a new chapter on NETCONF and SDN Presents expanded coverage of SDN in optical networks Provides support materials for use in computer networking courses
