## DECISION TREES AND RULES

### LEARNING OF DECISION TREES: ID3

- **ID3** (Quinlan: Induction of Decision Trees, Quinlan, 1986)
- Based on CLS (Concept Learning System)
  - only binary attributes
  - heuristic to decide what attribute to choose in each node of the tree
- Set of techniques with commercial success
- Generate **decision trees** from training examples
- Idea: find the simplest tree that best separate the examples
- Use a heuristic based on **entropy** to choose the attributes

DECISION TREE EXAMPLE

STRATEGY OF ID3

### ALGORITHM

1. Select an attribute $A_i$ that **maximizes the information gain** $G(A_i)$
2. Create a node for such attribute with as many successors as different values the attribute has
3. Distribute the training examples in the successors, using the value for attribute $A_i$
4. For each successor: if there's only examples of one class $C_k$, then label the node with $C_k$
   otherwise, call ID3 with a table made up of the examples of the node, erasing the column of attribute $A_i$
