Data Clustering with Python Guojun Gan,2025-09-15 Data clustering an interdisciplinary field with diverse applications has gained increasing popularity since its origins in the 1950s Over the past six decades researchers from various fields have proposed numerous clustering algorithms In 2011 I wrote a book on implementing clustering algorithms in C using object oriented programming While C offers efficiency its steep learning curve makes it less ideal for rapid prototyping Since then Python has surged in popularity becoming the most widely used programming language since 2022 Its simplicity and extensive scientific libraries make it an excellent choice for implementing clustering algorithms Features Introduction to Python programming fundamentals Overview of key concepts in data clustering Implementation of popular clustering algorithms in Python Practical examples of applying clustering algorithms to datasets Access to associated Python code on GitHub This book extends my previous work by implementing clustering algorithms in Python Unlike the object oriented approach in C this book uses a procedural programming style as Python allows many clustering algorithms to be implemented concisely The book is divided into two parts the first introduces Python and key libraries like NumPy Pandas and Matplotlib while the second covers clustering algorithms including hierarchical and partitional methods Each chapter includes theoretical explanations Python implementations and practical examples with comparisons to scikit learn where applicable This book is ideal for anyone interested in clustering algorithms with no prior Python experience required The complete source code is available at <https://github.com/ganml/dcpython>

Data Clustering Charu C. Aggarwal,Chandan K. Reddy,2016-03-29 Research on the problem of clustering tends to be fragmented across the pattern recognition database data mining and machine learning communities Addressing this problem in a unified way Data Clustering Algorithms and Applications provides complete coverage of the entire area of clustering from basic methods to more refined and complex data clustering approaches It pays special attention to recent issues in graphs social networks and other domains The book focuses on three primary aspects of data clustering Methods describing key techniques commonly used for clustering such as feature selection agglomerative clustering partitional clustering density based clustering probabilistic clustering grid based clustering spectral clustering and nonnegative matrix factorization Domains covering methods used for different domains of data such as categorical data text data multimedia data graph data biological data stream data uncertain data time series clustering high dimensional clustering and big data Variations and Insights discussing important variations of the clustering process such as semisupervised clustering interactive clustering multiview clustering cluster ensembles and cluster validation In this book top researchers from around the world explore the characteristics of clustering problems in a variety of application areas They also explain how to glean detailed insight from the clustering process including how to verify the quality of the underlying clusters through supervision human intervention or the automated generation of alternative clusters
