Three Theories of the Solar System

Three Theories of the Solar System

Three theories (geocentric, heliocentric, and tidal) have been proposed to explain the formation of the solar system.

In the geocentric theory, the Earth is at the center of the solar system. The Sun, Moon, and planets revolve around the Earth. This theory was widely accepted until the 16th century when Copernicus proposed the heliocentric theory.

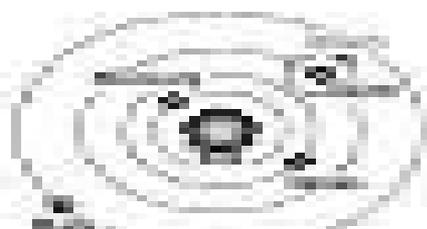

According to the geocentric theory, the Earth is at the center of the universe. The Sun, Moon, and planets revolve around the Earth. This theory was widely accepted until the 16th century when Copernicus proposed the heliocentric theory. The heliocentric theory states that the Sun is at the center of the solar system and the planets revolve around it. This theory was widely accepted until the 17th century when Newton proposed the tidal theory. According to the tidal theory, the solar system formed from a cloud of gas and dust that collapsed under its own gravity.

According to the tidal theory, the solar system formed from a cloud of gas and dust that collapsed under its own gravity. The Sun formed first, and the planets formed from the material that was left over. This theory was widely accepted until the 17th century when Newton proposed the tidal theory.
