Bio Design Nature Science Creativity:

Bio Design William Myers, 2014 Bio Design examines some seventy projects concepts prototypes and completed designs that cover the fields of architecture industrial processes education fine art material engineering and bioengineering Each project is illustrated by a short text images and captions that combine to explain the problems the venture tackles and how living materials and processes were harnessed to solve them in sustainable and aesthetically pleasing ways Designers and artists have always looked to nature for inspiration and materials but only recently have they been able to alter and incorporate living organisms in their work In a world with finite resources and a growing population design that mimics or appropriates the sustainable template of nature is likely to prove as vital as it is novel Many of the solutions also provoke thought about manipulating life for human ends From bacteria that can spin microfibrils of pure cellulose for use in the clothing industry to pigeons that fed special bacteria excrete harmless detergent instead of faeces and from lamps that require blood to function to genetically hacked plants with human DNA biological design is science future here and now

Structures and Architecture. A Viable Urban Perspective? Marie Frier Hvejsel, Paulo J.S. Cruz, 2022-07-08 Structures and Architecture A Viable Urban Perspective contains extended abstracts of the research papers and prototype submissions presented at the Fifth International Conference on Structures and Architecture ICSA2022 Aalborg Denmark 6 8 July 2022 The book 578 pages also includes a USB with the full texts of the papers 1448 pages The contributions on creative and scientific aspects in the conception and construction of structures as architecture and on the role of advanced digital industrial and craft based technologies in this matter represent a critical blend of scientific technical and practical novelties in both fields Hence as part of the proceedings series Structures and Architecture the volume adds to a continuous exploration and development of the synergetic potentials of the fields of Structures and Architecture With each volume further challenging the conditions problems and potentials related to the art practice and theory of teaching researching designing and building structures as vehicles towards a viable architecture of the urban environment The volumes of the series appear once every three years in tandem with the conferences organized by the International Association of Structures and Architecture and are intended for a global readership of researchers practitioners and students including architects structural and construction engineers builders and building consultants constructors material suppliers planners urban designers anthropologists economists sociologists artists product manufacturers and other professionals involved in the design and realization of architectural structural and infrastructural projects NERD III - New Experimental Research in Design Tom Bieling, Michelle Christensen, Florian Conradi, 2025-05-06 Design has long established itself as an independent research competence The New Experimental Research in Design NERD series seeks to provide a public platform to reflect upon and discuss the specifically experimental dimension of the field The contributions from researchers from around the world exhibit a diverse and insightful range of approaches giving rise to further debate and action in the rapidly evolving

field In times of multiple crises the authors in this volume strive to find tactics of response They introduce experiments into more than human design co species production critical algorithmic immersion feminist engagements with new materialism and more From autoethnographic explorations to socially engaged methods they challenge not just the role of design in these times but the self positioning of the designer Experimental design Practice based research Design methods Designer's Guide to Lab Practice Assia Crawford,2023-09-12 This book explores the growing field of bio design through interdisciplinary creative practice The volume illustrates a range of experimental working techniques while offering a foundational understanding of lab practice principles The book highlights the myriad of opportunities presented by microorganisms that have reshaped the planet and made it habitable The book provides an account of the creation of living materials from the point of view of an architectural design practitioner The transition from traditional design practice to laboratory investigation is captured highlighting strategies of creating partnerships across a range of fields The book demonstrates laboratory methods and ways of investigating the development of living materials and celebrates the growing body of practitioners scientists activists and anthropologists who are reimagining new strategies for addressing contemporary environmental challenges Designer s Guide to Lab Practice looks at ways in which integrating living components with needs of their own would not only help offset the environmental impact that we have on our planet but could also create a closer relationship with nature It is a working manual as well as a guide to emerging practitioners seeking to transition into a field that is yet to be defined and that offers the promise of a new era of human habitat making as a direct response to the looming ecological crisis

Creative Practice Inquiry in Architecture Ashley Mason,Adam Sharr,2022-10-03 This collection introduces illustrates and advances fresh ideas about creative practice inquiry in architecture It concerns architectural knowledge how architects can use their distinctive skills habits and values to advance professional insight and how such insights can be extended to make wider contributions to society culture and scholarship It shows how architectural ways of knowing and working can be mobilised as tools for research Collected here are a series of creative practices that emerge out of architecture and actively engage with other fields and methods reaching across the academic landscape Architectural inquiries collected in this book probe matters that lie beyond the obvious expectations the conventions the default of the discipline Drawing borrowing adapting dramatising perhapsing monsterring experimenting cartooning the tools and methods of each inquiry vary but they all share a common outward gaze engaging architectural ways of knowing with other disciplines and practices including the arts biological sciences ethnography and technology Chapters gathered here offer insight not only into incipient modes and tools of architectural research but emerging ethical practical and philosophical positions intimately tied to the creative practices involved Setting out the idea of creative practice inquiry in architecture this innovative volume offers a lively and resourceful contribution to a growing body of work on design as research It will be of interest to students keen to pursue architectural ways of thinking and writing practitioners who want to use their distinctive

Toward a Living Architecture? Christina Cogdell, 2019-01-01 A bold and unprecedented look at a cutting edge movement in architecture Toward a Living Architecture is the first book length critique of the emerging field of generative architecture and its nexus with computation

biology and complexity Starting from the assertion that we should take generative architects rhetoric of biology and sustainability seriously Christina Cogdell examines their claims from the standpoints of the sciences they draw on complex systems theory evolutionary theory genetics and epigenetics and synthetic biology She reveals significant disconnects while also pointing to approaches and projects with significant potential for further development Arguing that architectural design today often only masquerades as sustainable Cogdell demonstrates how the language of some cutting edge practitioners and educators can mislead students and clients into thinking they are getting something biological when they are not In a narrative that moves from the computational toward the biological and from current practice to visionary futures Cogdell uses life cycle analysis as a baseline for parsing the material energetic and pollution differences between different digital and biological design and construction approaches Contrary to green tech sustainability advocates she questions whether quartzite based silicon technologies and their reliance on rare earth metals as currently designed are sustainable for much longer challenging common projections of a computationally designed and manufactured future Moreover in critiquing contemporary architecture and science from a historical vantage point she reveals the similarities between eugenic design of the 1930s and the aims of some generative architects and engineering synthetic biologists today Each chapter addresses a current architectural school or program while also exploring a distinct aspect of the corresponding scientific language theory or practice No other book critiques generative architecture by evaluating its scientific rhetoric and disjunction from actual scientific theory and practice Based on the author s years of field research in architecture studios and biological labs this rare field building book does no less than definitively unsparingly explain the role of the natural sciences within contemporary architecture
