# Properties of Matter

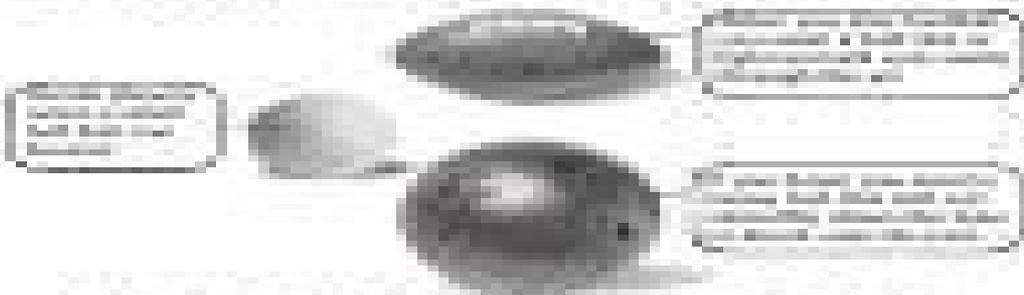

**Introduction**

Are you able to distinguish, based on its properties, the object

- Which is cooking, oil and water (physical properties)?
- Which are flammable and which are non-flammable (chemical properties)?

**What Are Physical Properties?**

Start with the bottle on the right below as shown in a well-lit room. Observe it from various perspectives.

If physical properties are characteristics that can be observed without changing the identity of the substance, observed the properties of an object carefully as shown. For example, you can observe an object's color, shape, size, mass, and volume. Observe the properties of an object and distinguish it by the properties of the substance the object is made of.

Many of the physical properties of materials that make up objects can be measured. These properties include density, hardness, magnetism, and the ability to conduct heat and electricity.

Some physical properties depend on how much of a material you have. In other words, a large amount of a material may have different properties than a smaller amount of the material. Other physical properties do not depend on how much of the material you have. They show that no matter how large or small a sample of material is, the particular property is always the same.

**Learning Objectives**

Identify the physical and chemical properties of substances. Distinguish between physical and chemical properties. Measure mass and volume.

**Learning Outcome**

By identifying the physical and chemical properties of substances, students can distinguish between physical and chemical properties.
