

# CLUTCH INSTALLATION INSTRUCTIONS & TECHNICAL GUIDE

- These instructions apply to all PowerTrain Technology, Inc. (PTT) multi-disc racing clutches from 4-1/2" up to 7-1/2" disc diameter. Before proceeding, ensure that you have selected, and received, the correct clutch for your application.
- Buy components that may affect clutch performance such as, in good condition and suitable for the use for which they are intended. (i.e. Distributing System, clutch-release system, pilot bearing, etc.)
- Check that pilot bearing in the crankshaft, is properly lubed & free of excess rust, with no evidence of scoring, out of roundness, cracking or spalling. A PTT Synthetic-Lube clutch adjustment shaft can be used for checking the proper size of the pilot bearing. It has a precisely sized pilot on the end. Simply insert it into your pilot bearing and check for correct fit.
- The transmission input shaft must be accurately aligned to the engine crankshaft. The following performs this critical alignment function. Check your distributing to insure that the transmission input shaft is concentric within 0.002" (2 mils) misalignment maximum to the engine crankshaft. Two feet of the input shaft free to the bearing in the transmission mounting surface of the distributing within 0.002" (2 mils) or less. Detailed instructions for this inspection procedure can be found at the PTT website ([www.powertrain-tech.com](http://www.powertrain-tech.com)). Performing this step avoids excessive input shaft wear on the clutch hub and input shaft. It also helps prevent clutch chatter, disc, face chattering, and other problems.
- Inspect the input shaft and clutch disc surfaces for wear and/or. Do not lubricate. Check the new clutch disc splines for proper engagement on your input shaft. They must fit snugly on the input shaft splines and not bind, swimming or bottom out. Take the opportunity now to look at the input shaft splines closely to insure that they do not even appear rounded or beveled.
- Inspect the clutch hubs that come with your clutch, from the backside of the flywheel. (Some flywheels do not require this.) Check the used flywheel mounting surface for corrosion, pitting, cracks, or excessive flats. The flywheel must be aligned to the distributing fit on the crank mounting surface, with no evidence of binding. Install the System. Torque the System mounting bolts according to the engine or used manufacturer's instructions. PTT recommends the use of a medium-strength pressure treated locking compound (Loctite® or similar product) (DO NOT USE STAIN RESISTANT).
- Check to see that the clutch disc release the flywheel fit is interference with the System bolts in crankshaft.
- Decrease the clutch disc gaps, finger slots, pressure plate and the backing plate to minimum. Keep finger settings clean and dry, taking special care to avoid oil or grease contamination.**
- Check that the clutch is assembled correctly. If your discs are labeled showing clutch disc orientation, install the clutch discs according to the labels. On our disc clutches the most used stamped PTT discs feature the engine on the disc clutches, the flywheel back, stamped PTT discs do have both sides. On these disc clutches, the flywheel side must have stamped PTT on the top and both sides have both sides. In the order they can be installed in either direction. Flywheel clutches need to have the flywheel stamped on the same position. Please refer to the drawing below for proper hub assembly on to the distributing that came with your clutch.

**NOTE:** All clutch parts shown here are transmission side up; engagement side down.
