Singular Value Decomposition in Image Noise Filtering and Reconstruction Tsegaselassie Workalemahu,2008 The Singular Value Decomposition SVD has many applications in image processing The SVD can be used to restore a corrupted image by separating significant information from the noise in the image data set This thesis outlines broad applications that address current problems in digital image processing In conjunction with SVD filtering image compression using the SVD is discussed including the process of reconstructing or estimating a rank reduced matrix representing the compressed image Numerical plots and error measurement calculations are used to compare results of the two SVD image restoration techniques as well as SVD image compression The filtering methods assume that the images have been degraded by the application of a blurring function and the addition of noise Finally we present numerical experiments for the SVD restoration and compression to evaluate our computation *Hybrid Video Compression Standard* Dhaval R. Bhojani,Vedvyas J. Dwivedi,Rohit M. Thanki,2019-09-18 The book presents compression techniques for digital video stream describing their design using various image transforms such as discrete cosine transform DCT discrete wavelet transform DWT and singular value decomposition SVD It first discusses the basic requirements and applications of video compression techniques The book then addresses video compression using DCT as well as the hybrid compression technique designed and implemented using DCT DWT and SVD demonstrating the simulation results for both Lastly it proposes future research directions in the field

Implementation of Image Compression Algorithm Using Verilog with Area, Power and Timing Constraints , Image compression is the application of Data compression on digital images A fundamental shift in the image compression approach came after the Discrete Wavelet Transform DWT became popular To overcome the inefficiencies in the JPEG standard and serve emerging areas of mobile and Internet communications the new JPEG2000 standard has been developed based on the principles of DWT An image compression algorithm was comprehended using Matlab code and modified to perform better when implemented in hardware description language Using Verilog HDL the encoder for the image compression employing DWT was implemented Detailed analysis for power timing and area was done for Booth multiplier which forms the major building block in implementing DWT The encoding technique exploits the zero tree structure present in the bitplanes to compress the transform coefficients
